Course Title: INDUSTRIAL SAFETY & HEALTH		Course Code :	QA 111
<u>Course Background/Summary:</u> Effective occupational health and safety programs must demonstrate effective management leadership, worker participation, continual improvement, evaluation, integration, management review in the workplace. Companies with good results and leadership will not allow substandard results. Although cooperation and consensus is important in gaining employee buy - in to the program, ultimately it is the leadership and commitment from management that drives the process. The audit will assess the level of leadership and commitment to health and safety within the organization to evaluate the program. Despite the value to employers and workers in terms of injuries prevented and cost saved, many factories have not yet adopted injury and illness prevention programs for workers safety. It is believed that injury and illness prevention programs will provide the foundation for changes in the way employers identify and control hazards, leading to significantly improved overall workplace health and safety environments. Adoption of injury and illness prevention program will result in both improved workers safety and workers suffering fewer injuries, illnesses and fatalities.			
<u>Course Objectives:</u> <ul style="list-style-type: none">• Understanding The Concept Of Industrial Safety & Health• Identify The Management Roles For Industrial Safety & Health• Identify The Employee Roles For Industrial Safety And Health• Understanding The Hazard And Identify The Solutions• Understanding The Industrial Accident Prevention Technique
