<b>No</b>	<b>Items</b>	<b>Page Number</b>
1	UniKL's Vision and Mission	4
2	Academic Activities Guidelines	5
3	Introduction to UniKL-MSI	6 – 8
4	UniKL-MSI Organisation Structure	9
5	Academic Administration Staff	10 – 13
6	Staff List:	
	a. Mechanical Section	14 – 17
	b. Manufacturing Section	18 – 20
	c. Electrical Electronics & Automation Section	21 – 25
	d. Engineering Section	26 – 27
	e. Student Development Section	28 – 29
	f. Business Technology Section	30
7	Advisory System/ Mentor-Mentee/ Probationary System	31
8	Admission Requirements	32 -34
9	Grading System	35 - 36
10	External Panel UniKL-MSI Programmes	37 – 42
11	Preparatory Programme Description (PEOs, PLOs & Programme Structure)	43 – 47
12	Diploma Programme Description (PEOs, PLOs & Programme Structure)	48 – 65
13	Bachelor Programme Description (PEOs, PLOs & Programme Structure)	66 –100
14	Synopsis of Courses offered by Section:	
	a. Mechanical Section	101 – 107
	b. Manufacturing Section	108 – 113
	c. Electrical Electronics & Automation Section	114 – 122
	d. Engineering Section	123 – 129
	e. Student Development Section	130 – 135
	f. Business Technology Section	136 – 142
15	Facilities And Ethics in Laboratory Work	
	a. Teaching And Learning Facilities	143
	b. Laboratories Facilities	144
	c. Objectives Of Laboratory Work and Workshop	145
	d. Work Ethics	

# UniKL's VISION AND MISSION

Our vision is to become the leading entrepreneurial technical university in the country by 2020 through excellence in research, education, training, entrepreneurship, consultancy and community services.

## CORPORATE STRATEGY UniKL

 **VISION**  
TO BE THE LEADER ENTREPRENEURIAL TECHNICAL UNIVERSITY

 **MISSION**  
TO PRODUCE ENTREPRISING GLOBAL TECHNOPRENEURS

### SHARED VALUES

# ACADEMIC ACTIVITIES GUIDELINES

ACTIVITIES	TIMELINE (ACADEMIC WEEK)
<b>SEMESTER REGISTRATION</b>	
<b>Semester Registration for Returning Students</b>	<ul style="list-style-type: none"> <li>○ Registration is opened until the Friday of the 1<sup>st</sup> Week of the new academic semester</li> </ul>
<b>Late Registration</b>	<ul style="list-style-type: none"> <li>○ Late registration is opened until the Friday of the 2<sup>nd</sup> Week of the new academic semester and will be subjected to a fine of RM50.00</li> <li>○ If a student fails to register his academic semester within the specified period without any valid reasons given, his students status will be deferred, or he will be dismissed from the University</li> </ul>
<b>ADD/DROP/WITHDRAWAL FROM SUBJECT</b>	
<b>ADDING SUBJECT</b>	<ul style="list-style-type: none"> <li>○ Students may add subjects before the end of Week 1 of an academic semester but the approval to do so is subject to the availability of places in the classes concerned.</li> <li>○ Add subject is not allowed after Week 1</li> </ul>
<b>DROP SUBJECT</b>	<ul style="list-style-type: none"> <li>○ Subject may be dropped before the end of Week 4 of an academic semester</li> <li>○ Drop subject is not allowed after Week 4</li> </ul>
<b>WITHDRAWAL SUBJECT</b>	<ul style="list-style-type: none"> <li>○ Applications to withdraw registered subjects must be made from Week 5 to Week 9 of an academic semester</li> <li>○ Withdrawals are not allowed after Week 9</li> </ul>
<b>VERIFICATION OF SUBJECT REGISTRATION</b>	<ul style="list-style-type: none"> <li>○ Students are responsible to verify the correctness of their subject registration records by Week 4.</li> </ul>
<b>FINAL EXAMINATION</b>	Week 16 - 17
<b>BAR LIST RELEASE</b>	<ul style="list-style-type: none"> <li>○ Week 12</li> </ul>
<b>PRINTING OF EXAM ENTRY SLIPS</b>	<ul style="list-style-type: none"> <li>○ Week 14</li> <li>○ Students must check to confirm correctness of spelling or names, student ID and IC Numbers</li> <li>○ Students clear their status with Finance before printing the examination entry slip from e-CITIE system.</li> <li>○ Students who have outstanding matters with Finance will not be able to print the examination slip.</li> </ul>

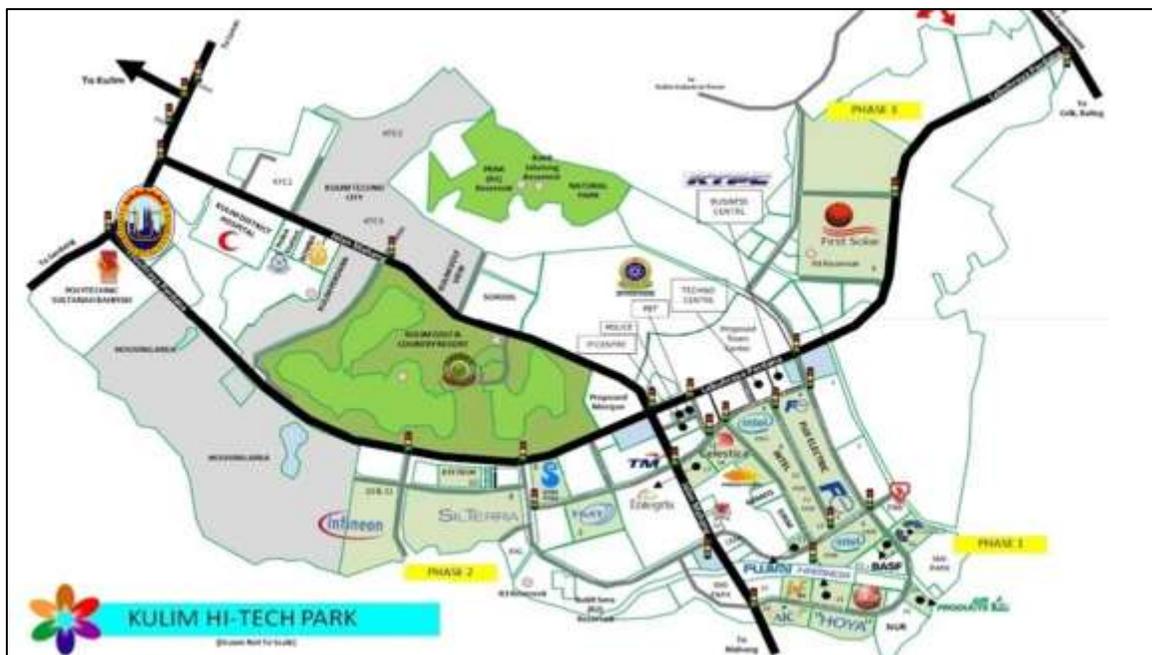

# INTRODUCTION (UniKL-MSI)

Universiti Kuala Lumpur Kampus Cawangan Malaysian Spanish Institute (UniKL-MSI) is one of the listed branch campuses under Universiti Kuala Lumpur (UniKL). It is an advanced technical training centre in the field of engineering technology specializing in mechanical, manufacturing, electrical and electronics which are fully supported by the Malaysian government.

UniKL-MSI started its operation at the temporary campus at Techno Centre, Kulim Hi-Tech Park in August 2002 and later moved to the main campus which was built on a piece of land approximately 39 acres, also in Kulim Hi-Tech Park, Kulim, Kedah in December 2003. It was incorporated in August 2002 as a co-operation project between the Malaysian government represented by MARA and the Spanish government.

Courses offered are at foundation, diploma, bachelor to postgraduate levels. Professional training and customized courses are also available.

Currently, UniKL-MSI has 5 academic sections and offers 7 bachelors, 5 diplomas and 1 foundation programme. Table 1 lists the programmes.

Appendix 1: Location of UniKL-MSI Campus at Kulim Hi-Tech Park

In November 1999, MARA and CONTES signed the collaboration agreement to set up a higher technical training center, the Malaysian Spanish Institute, hereafter MSI, in the Kulim Technological Park. The purpose of this center is to provide highly qualified workforce to local companies as well as to provide training for the staff of local companies around the Kulim Technology Park. *Following the signing of the agreement, the construction project kicked off on February 15, 2000. In accordance with the agreement, CONTES, as the supplier of technical assistance, was responsible to identify the professional skills required by the Malaysian companies to be enable MSI to design the trainings tailor-made for them.*

Table 1: List of programmes offered by section

No.	Name of Section	No. of Programmes Offered
1.	Mechanical Section	1. Bachelor of Engineering Technology (Hons) in Mechanical (Automotive) – BETA Mechanical <b>JPT/BPP (R3/525/6/0069) 09/29, MQA FA 13397</b>
		2. Bachelor of Engineering Technology (Hons) in Mechanical Design – BET MD <b>JPT/BPP(R/521/6/0126) 06/27, MQA FA 7648</b>
		3. Diploma of Engineering Technology in Mechanical Design and Development – DET MDD <b>JPT/BPP (R3/0714/4/0018)06/29, MQA/FA 13395</b>
2.	Electrical, Electronics and Automation Section	1. Bachelor of Mechatronics Engineering Technology (Automotive) with Honours – BETA Mechatronics <b>JPT/BPP (R3/525/6/0067) 09/29, MQA FA11196</b>
		2. Bachelor of Engineering Technology (Hons) in Applied Electronics – BET AE <b>JPT/BPP (R/523/6/0278) 06/27, MQA FA 7649</b>
		3. Diploma of Engineering Technology in Electromechanical Installation and Maintenance – DET EIM <b>JPT/BPP (R3/0713/4/0034) 06/29, MQA/FA 13396</b>
		4. Diploma of Electronic Engineering Technology (Industrial Automation and Control) – DEET IAC <b>JPT/BPP (R3/0713/4/0016) 06/29, MQA/FA 13668</b>
3.	Manufacturing Section	1. Bachelor of Engineering Technology (Hons) in Manufacturing (Automotive) – BETA Manufacturing <b>JPT/BPP (R3/525/6/0068) 09/29, MQA FA 13398</b>
		2. Diploma of Engineering Technology in Production – DET PET <b>JPT/BPP (R3/0714/4/0019) 06/29, MQA/FA 16275</b>
4.	Engineering Section	1. Bachelor of Mechanical Engineering with Honours – BeME <b>JPT/BPP (R/521/6/0160) 07/29, MQA FA 8216</b>
		2. Foundation in Engineering for Spanish Universities - Pre-Spain <b>JPT/BPP (R2/520/3/0059) 10/22, MQA A 9480</b>
		3. Foundation in Science and Arts - FSA <b>JPT/BPP (N/0011/0002) 4/27, MQA PA 15460</b>
5.	Business Technology Section	1. Bachelor of Business Technology in Automotive Management – BBT AM <b>JPT/BPP (N/345/6/1095) 04/26, MQA PA 11195</b>
		2. Master of Business Technology - MBT <b>JPT/BPP (N/345/7/1115) 08/27, MQA PA 13370</b>

The character of the MSI and in its effort to serve local companies and its social environment obliges the MSI to provide adequate solutions to adapt its training offer to real needs of the mechanical sector especially in automotive technology industry. During this identification stage in which the syllabus of the MSI has been defined, the purpose is to locate the real needs through identification of skills required by the local companies. Analysis was conducted aimed to complement, with a more qualitative character and a content, the guidelines for training needs of human resources established in the draft proposal.

Based on the functions that MSI played in its earlier days, particularly in serving local companies and community, the training centre naturally evolved into an entity which provided solutions and training that responded to real needs of the mechanical sector especially in the automotive technology industry which formed the heart of the Kulim Industrial Park.

The tailor-made training modules and solution services formed the basis of and to a certain extent, defined the curriculum and syllabus of the Malaysian Spanish Institute. Further analysis and modifications were made, adding more qualitative character and contents that complement the skills of the human capital suitably match for the automotive technology sector/industry.

There is a lot of demand in the mechanical area for highly qualified engineers who can design, program and develop besides having good organizational skills and a sense of responsibility.

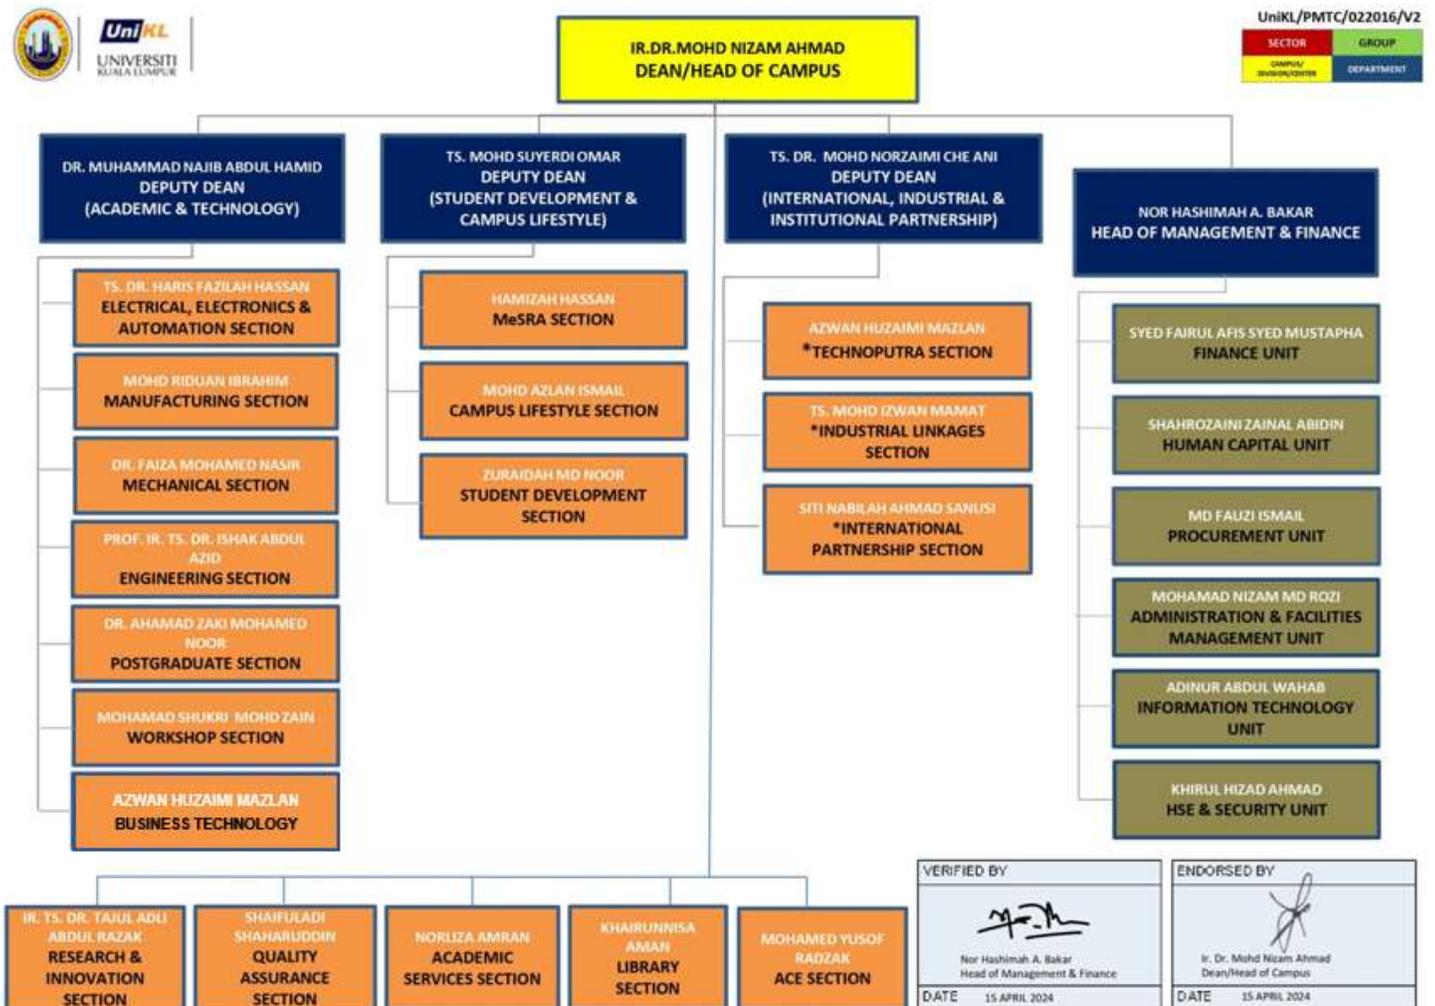

Apart from technical knowledge and skills, all UniKL MSI students will be exposed to other subjects which are also important for enhancing towering personality and future career prospects of our students such as Bahasa Malaysia, English, Spanish, Mandarin, Islamic and Moral Studies, Entrepreneurship and Project Management. For their Final Year Project, students are requested to develop and complete their project based on mechanical and automotive component manufacturing whereas for industrial internship (INTRA), students will undergo industrial training at manufacturing and automotive industries before completing their studies in UniKL MSI. Among companies which are linked with UniKL MSI INTRA students are Inokom, Ingress, Modenas, Silterra, Omron, Integris, Isuzu Hicom and Hicom Automotive Manufacturer Malaysia.

UniKL MSI campus provides excellent facilities for students which features the latest industrial equipment and machineries for workshop and laboratories covering Conventional Machining Workshop , CNC Machine Workshop, Mould Fabrication, Sheet Metal, Automotive Performance Lab, Vehicle Dynamics and Chassis Lab, Flexible Manufacturing Lab, Computer Aided Design Lab (CATIA), Hydraulics and Pneumatics Lab, Automation and Control System Lab, Electrical and Electronics Lab, Industrial Computing Labs, CNC Maintenance and Robotic Lab, Electric Machine Lab, Metrology Lab, Materials Lab and others. As the programs are focused on mechanical and automotive components manufacturing technology, our campus is also equipped with new machines and software such as Rapid Prototyping (RP) Machine, new CAD software – CATIA and other machines like Electro-Discharge Machine (EDM) and Wire cut Machine.

# UniKL- MSI ORGANISATION STRUCTURE

UniKL MSI is leading by Dean/Head of Campus and supported by three (3) Deputy Deans. Dep. Dean (Academic & Technology), Dep Dean (Student Development & Campus Lifestyle) and Dep. Dean (International industrial & Institutional Partnership). In the aspect of administration, HR and Finance the Dean is being supported by the Head of Administration and Finance. The full Organizational Structure is illustrated in the Appendix 2.

## ORGANIZATION CHART - UniKL MSI

Appendix 2: UniKL-MSI Organisation Structure

# ACADEMIC ADMINISTRATION STAFF

## Dean's Office

**Head of Campus/ Covering  
Dean**

Ir. Dr. Mohd Nizam b. Ahmad

**Deputy Dean (*Academic &  
Technology*)**

Dr. Muhammad Najib Bin Abdul  
Hamid

**Deputy Dean (*Student  
Development & Campus  
Lifestyle*)**

Ts. Mohd Suyerdi Bin Omar

**Deputy Dean  
(*International, Industrial &  
Institutional Partnership*)**

Ts. Dr. Mohd Norzaimi B. Che  
Ani

# ACADEMIC ADMINISTRATION STAFF

## Head of Section:

**Mechanical**  
Dr. Faiza Binti Mohamed Nasir

**Electrical, Electronics & Automation**  
Ts. Dr. Haris Fazilah Bin Hassan

**Manufacturing**  
Mohd Riduan Bin Ibrahim

**Engineering**  
Ir. Ts. Prof. Dr. Ishak Bin Abdul Azid

**Student Development**  
Zuraidah Bt. Md Noor

**Business Technology**  
Azwan Huzaimi Bin Mazlan

**Postgraduate**  
Dr. Ahamad Zaki Bin Mohamed Noor

**Quality Assurance**  
Shaifuladi Bin Shahrudin

# ACADEMIC ADMINISTRATION STAFF

## Head of Department and Coordinator:

<b>Workshop and Teaching and Learning (CITC)</b>	: Siti Lydia Binti Rahim
<b>Academic Services</b>	: Norliza Binti Amran
<b>Research &amp; Innovation</b>	: Ir. Ts. Dr. Tajul Adli Bin Abdul Razak
<b>Library</b>	: Khairunnisa Binti Aman
<b>International Partnership</b>	: Nabilah Huda Md Amin
<b>Industrial Linkages</b>	: Ts. Mohd Izwan Bin Mamat
<b>Centre for Advancement &amp; Continuing Education (ACE)</b>	: Mohamed Yusof Bin Radzak
<b>Marketing, Student Recruitment &amp; Admission (MeSRA)</b>	: Hamizah Bin Hassan
<b>Innovation</b>	: Ts. Khairul Shahril Bin Shaffee
<b>Research</b>	: Dr. Ahmad Kamal Bin Ismail
<b>Final Year Project (FYP)</b>	: W Faradiana Binti W Maidin
<b>Co-Curriculum</b>	: Fazrul Azmi b. Zulkifli

# ACADEMIC ADMINISTRATION STAFF

## Programme Coordinator:

### New Programme

**Master in Business Technology** : Dr. Nurhayati Binti Abdullah

### Bachelor Engineering, Engineering Technology & Business Technology Programmes

**BET Mechanical (Automotive)** : Siti Rohana Binti Ahmad

**BET Mechatronics (Automotive)** : Dr. Mohd Rezal Bin Mohamed

**BET Manufacturing (Automotive)** : Kauthar Binti A. Rhaffor

**BET Applied Electronics** : Najwan Osman Bin Ali

**BET Mechanical Design** : Dr. Mohamad Sabri Bin Mohamad Sidik

**BE Mechanical with Honours** : Assoc. Prof. Dr. Shahril Nizam Bin Mohamed Soid

**BBT Automotive Management** : Maisurah Binti Zakaria

### Diploma Engineering Technology Programmes

**DET Mechanical Design & Development** : Noorhelinahani Binti Abu Bakar

**DET Production** : Syed Ahmad Faiz Bin Syed Mohd

**DEET (Industrial Automation & Control)** : Mohamad Rosyidi B. Ahmad

**DET Electromechanical Installation & Maintenance** : Julaida Binti Abd Jalil

### Foundation in Engineering Programme

**Foundation in Engineering for Spanish Universities** : Zakiah binti Ahmad

**Foundation in Science and Arts** : Nor Shafiqah Binti Mohamed Shafiee

## ACADEMIC STAFF – MECHANICAL SECTION

ACADEMIC STAFF	SPECIALISATION	RESEARCH AREA
 <p><b>Dr. Faiza binti Mohamed Nasir</b> <i>Head of Section</i> <i>Senior Lecturer</i> PhD in Engineering, USM M.Sc. (Oil &amp; Gas Engineering), Uni. Of Western Australia. M.Eng (Mech. Eng.) Uni. Of Strathclyde, UK.</p>	Mechanical Engineering – Thermofluids, Thermodynamics, Heat Transfer, Petroleum Engineering	Thermophysical Properties, Thermodynamics Convection Heat Transfer, Heat Exchanger, Heat Pipes, Thermal management, CFD Thermal Analysis
 <p><b>Dr. Sharmiwati binti Mohammed Sharif</b> <i>CWS Coordinator</i> <i>Senior Lecturer</i> Ph.D. in Engineering (Advanced Materials), USM M.Sc. (Material Science), UPM. B.Sc. (Hons.) (Material Science), UPM.</p>	Materials Science	Ceramic Technology Porous Materials
 <p><b>Dr. Ahmad Kamal bin Ismail</b> <i>Research Coordinator</i> <i>Senior Lecturer</i> Ph.D. in Mechanical Eng. (Combustion), USM. M.Sc. (Mechanical Eng.), USM. B.Eng. (Hons.) (Mechanical Eng.), USM.</p>	Thermal Fluids	Porous Medium Combustion Cogeneration Thermal System
 <p><b>Baizura Bt. Zubir</b> <i>Senior Lecturer</i> M.Eng (Mechanical- Advanced Manufacturing Technology), UTM. B.Eng. (Hons.) (Mechanical Eng.), USM.</p>	Metrology, Engineering Design and Engineering Management	Product Design and Occupational Safety & Health
 <p><b>Mohamad Shukri bin Mohd Zain</b> <i>Head of Workshop</i> <i>Senior Lecturer</i> M.Eng (Manufacturing System), UPM. B.Eng. (Hons.) (Mechanical Eng.), UTM.</p>	Design Development, Automotive Testing & Prototyping, Automotive Standard and Compliant	Internal Combustion Engine & Applied Mechanics
 <p><b>Dr. John Jabaraj Devadason</b> <i>Senior Lecturer</i> Ph. D (Biophysics), USM. M.Sc. (Medical Physics), USM. B.Sc. (Hons.) (Nuclear Science), UKM.</p>	Physics, Medical Physics and Nuclear Science	Fundamental and Applied Physics, Fundamental and Applied Mathematics
 <p><b>Mohd. Nurhidayat bin Zaelem</b> <i>Senior Lecturer</i> M.Eng. (Manufacturing System), UPM. B.Eng. (Hons.) (Mechanical Eng.), UTM.</p>	Applied Mechanics, Strength of Material, Automotive Engineering and Molecular Dynamics	Synthesis of Nanomaterials (Carbon Based) and Automotive Testing

## ACADEMIC STAFF – MECHANICAL SECTION

ACADEMIC STAFF	SPECIALISATION	RESEARCH AREA
 <p><b>Mohamad Sabri bin Mohamad Sidik</b> <i>Programme Coordinator</i> <i>Senior Lecturer</i> M.Eng. (Manufacturing System), UPM. B.Sc. (Hons.) (Mechanical Eng.), USM.</p>	Quantum and Molecular Computational	Metal-Air Battery
 <p><b>Ts. Khairul Shahril bin Shaffee</b> <i>Senior Lecturer</i> M.Eng (Manufacturing System), UPM. B.Sc. (Hons.) (Mechanical Eng.), USM.</p>	Strength of Materials, Fluid Mechanics, CAE	Finite Element Analysis and CFD.
 <p><b>Nor Haniza binti Bakhtiar Jemily</b> <i>Senior Lecturer</i> M.Sc. (Mechanical Eng.), USM. B.Tech. (Quality Control &amp; Instruments), USM.</p>	Quality Control & Instruments, Computer Aided Design (CAD)	Manufacturing design, Occupational Safety and Health Study
 <p><b>Ts. Mohd Suyerdi bin Omar</b> <i>Deputy Dean SDCL</i> <i>Senior Lecturer</i> M.Eng (Manufacturing Systems), UPM. B.Eng. Tech. (Hons.) (Product Design), UniKL.</p>	Product Design and Development, Advanced Manufacturing and Tool and Die	Product Design and Development, Advanced Manufacturing, Plastic processing
 <p><b>Fazidah binti Saad</b> <i>Senior Lecturer</i> M.Sc. (Automotive Engineering), UIAM. B.Eng. (Hons.) (Mechanical Eng.), USM. Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	CAD, Design and Development, Automotive Engineering	Finite Element Analysis, Sound and Vibrations, Automotive Engineering
 <p><b>Siti Rohana binti Ahmad</b> <i>Programme Coordinator</i> <i>Lecturer</i> M.Sc. (Material Eng.), UniMAP. B.Eng. (Hons.) (Mechanical Eng.) UiTM.</p>	Mechanical & Material Engineering	Mechanical Testing & Polymer Nanocomposites
 <p><b>Johan Ihsan bin Mahmood</b> <i>Lecturer</i> M.Eng Sc. (Structural Analysis) UNSW, Australia. B. Eng. (Hons.) (Mechanical Eng.), USM.</p>	Structural Analysis, Finite Element Analysis, Product Design, Electronic Packaging	Applied Mechanics, Structural Analysis

## ACADEMIC STAFF – MECHANICAL SECTION

ACADEMIC STAFF		SPECIALISATION	RESEARCH AREA
	<p><b>Mior Firdaus bin Mior Abd Majid</b>  <i>Lecturer</i>            M.Sc. (Mechanical Eng.), USM.            B.Eng. (Hons.) (Mechanical Eng.), USM.</p>	Applied Mechanics & Thermal Fluid	Electronic Packaging, Electronic Cooling, Thermal Management
	<p><b>Noorhelinahani Bt. Abu Bakar</b>  <i>Programme Coordinator</i>  <i>Lecturer</i>            M.Sc. (Energy Systems &amp; The Environment), Strathclyde University, UK.            B.Eng. (Hons.) (Mechanical Eng.), USM.</p>	Thermal Fluid, Metrology	Renewable Energy (Biomass)
	<p><b>Ts. Khairul Akmal bin Shamsuddin</b>  <i>Lecturer</i>            M.Eng (Manufacturing System), UPM.            B.Eng. (Hons.) (Manufacturing with Management), USM.            Dip. (Manufacturing Technology), POLIMAS.            Cert. (Manufacturing Technology), PUO.</p>	Manufacturing System, Computer Aided Design (CAD), Ergonomics	Generative Modelling (CAD), Manufacturing Design and Fabrication
	<p><b>Zainal Nazri bin Mohd Yusof</b>  <i>Lecturer</i>            M.Sc. (Mechanical Eng.), USM.            B.Eng. (Hons.) (Mechanical Eng.), USM.</p>	Structural Analysis, Vibration and Welding Technology	Structural (Static and Dynamic)
	<p><b>Awang bin Idris</b>  <i>Lecturer</i>            M. Automotive Engineering, UMP.            B.Eng. (Mechanical Eng.) (Hons.), UTM.            Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	Internal Combustion Engine, Alternative Fuel, Computational Fluid Dynamics, Computer Aided Design, Natural Ventilation Study	Engine Performance Electric Vehicle and Additive Manufacturing
	<p><b>W Faradiana Bt. W Maidin</b>  <i>FYP Coordinator</i>  <i>Lecturer</i>            M.Eng (Manufacturing Systems), UPM.            B.Eng. (Hons.) (Manufacturing &amp; Management), USM.</p>	Metrology, Manufacturing System	Manufacturing System, Occupational Safety and Health
	<p><b>Mazwin binti Tan</b>  <i>Lecturer</i>            M.Sc. (Mathematics), USM.            Applied Sc. (Hons.)            (Computer Modelling), USM.</p>	Calculus, Algebra and Differential Equation	Computer Aided Geometric Design

Tech.), IMH, Spain.</p>	<p>Tool &amp; Die and Mould Design &amp;            Fabrication, CNC Machining, CAD            CAM.</p>	<p>CNC Machining, Manufacturing            Systems Engineering.</p>
	<p><b>Suhaimi B. Nayan</b>  <i>Senior Specialist</i>            Dip. (Precision Moulds Engineering), Institute of            Precision Mould Penang.            Cert. (Industrial Technician) ILP, Ipoh.</p>	<p>Tool and Die, Mould Fabrication</p>	<p>Mould Design and Analysis</p>

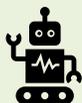

## ACADEMIC STAFF – ELECTRICAL, ELECTRONIC AND AUTOMATION SECTION

ACADEMIC STAFF	SPECIALISATION	RESEARCH AREA
 <p><b>Dr. Ts. Haris Fazilah b. Hassan</b> <i>Head of Section</i> <i>Senior Lecturer</i> Ph.D. (Electrical System), UniMAP M.Sc. (Electronics System Design Eng.), USM. B.Eng. (Hons.) (Electrical Eng. -Instrumentation), UiTM.</p>	Renewable Energy, Industrial Instrumentation, Automation System, Electrical & Electronics	Renewable Energy & Smart System.
 <p><b>Prof. Dr. Azmi bin Hassan</b> <i>Deputy President IIIIP</i> <i>Professor</i> Ph.D. (Systems Engineering) University of Wales, Cardiff UK. B.Sc. (Hons.) (Manufacturing Eng.), Leeds Metropolitan University, UK. Certificate of Manufacturing Technology, Airedale &amp; Wharfedale College Leeds, UK.</p>	Manufacturing and Systems Engineering	Manufacturing Engineering (Automation, CAM/CAPP), Artificial Intelligence & Optimisations, Radio Frequency Identification (RFID) and Applications
 <p><b>Ts. Dr. Abdul Malik Bin Mohd Ali</b> <i>Senior Lecturer</i> Ph.D. in Electrical &amp; Electronics Engineering, UniKL M.Sc. (Electrical Engineering), Universiti Tun Hussein Onn. B.Eng. (Hons.) (Electrical) Staffordshire University, Staffordshire, United Kingdom.</p>	Electrical High Voltage, Low Voltage, Control System, Power Electronics, Electric Machine, Medical Robotic, Robotic Automation, Biomedical Sensor and Printed Circuit Board System	Low/High Voltage Power Electronic System, Medical Robotic Application, Surface Biomedical Sensor and Data Analysis & Processing
 <p><b>Ts. Dr. Nurazlin bt. Mohd Yaakop</b> <i>INTRA Coordinator</i> <i>Senior Lecturer</i> PhD In Engineering (Power Electronics &amp; Drive), UTeM M.Sc. (Automation, Image &amp; Signal Processing), Univ. La Rochelle, France. B.Eng. (Hons.) (Electrical Eng.), USM. Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	Electric machines and Power Electronics	Electrical Power
 <p><b>Ts. Dr. Norramlee b. Mohamed Noor</b> <i>Senior Lecturer</i> Ph.D. in Electrical Power Engineering, UPM M.Eng (Electrical Power), UTM. B.Eng. (Hons.) (Information Technology), OUM.</p>	Industrial Automation (PLC & FMS), Electrical & Electronic Engineering, Pneumatic & Hydraulic System.	Electrical Power Engineering, Electric Vehicle
 <p><b>Dr. Mohd Fauzi b. Abu Hassan</b> <i>Senior Lecturer</i> Ph.D. Industrial Automation, UniKL M.Sc. (Automation, Image &amp; Signal Processing), Univ. La Rochelle, France. B.Eng. (Hons.) (Electrical – Mechatronics), UTM. Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	Automation, Signal and Image Processing	Computer Vision and Pattern Recognition

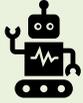

## ACADEMIC STAFF – ELECTRICAL, ELECTRONIC AND AUTOMATION SECTION

ACADEMIC STAFF	SPECIALISATION	RESEARCH AREA
 <p><b>Dr. Mohd Rezal b. Mohamed</b> <i>Programme Coordinator</i> <i>Senior Lecturer</i> Ph.D. in Electrical &amp; Electronics Engineering (Electrical Machine &amp; Drives), USM M.Sc. (Electronics Eng.), UPM. B.Eng. (Hons.) (Electrical and Electronics), UPM.</p>	Power Electronics, Electric Machine and Drives, Magnetic Pulsed	Electrical Vehicle, Electric Machine, Magnetic Pulsed, Electrical and Electronics Circuit Design
 <p><b>Mohamed Yusof b. Radzak</b> <i>Head of ACE</i> <i>Senior Lecturer</i> M.Sc. (Electrical &amp; Electronic), USM. B.Eng. (Hons.) (Electrical &amp; Electronic), USM.</p>	Control and Robotics Electrical Machines	Mobile Robotics, Electric Vehicles, Renewable Energies and Smart Systems
 <p><b>Halina bt. Hassan</b> <i>Programme Coordinator</i> <i>Senior Lecturer</i> M.Sc. (Electronics System Design Eng.), USM. B.Eng. (Hons.) (Electrical &amp; Electronics), UK.</p>	Electronics, Digital Signal Processing	Electronics, Digital Signal Processing
 <p><b>Norhalimatul Sadiyah bt. Hj. Kamaruddin</b> <i>Senior Lecturer</i> M.Eng (Electrical), UTM. B.Eng. (Hons.) (Electronics Electrical Systems Eng.), Leeds Metropolitan Univ. UK. Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	Control System, Measurement & Instrumentation, Sensor Technology	Electrical Process Tomography, Control System
 <p><b>Najwan b. Osman Ali</b> <i>Programme Coordinator</i> <i>Senior Lecturer</i> M.Sc. (Imaging), USM. B.Eng. (Hons.) (Mechatronic Eng.), USM.</p>	Electrical Tomography	Electrical Tomography, Control System
 <p><b>Norzalina bt. Hj. Othman</b> <i>Senior Lecturer</i> M.Sc. (Automation, Image &amp; Signal Processing), Univ. La Rochelle, France. B.IT (Hons.) (Networking), UUM.</p>	Automation, Image and Signal Processing, Industrial Computing & Communication	Image Processing & Machine Vision, Hardware & Software Interfacing.

## ACADEMIC STAFF – ELECTRICAL, ELECTRONIC AND AUTOMATION SECTION

ACADEMIC STAFF	SPECIALISATION	RESEARCH AREA
 <p><b>Amir Shauqee b. Abdul Rahman</b> <i>Senior Lecturer</i> M.Sc. (Electronic), USM. B.Eng. (Hons.) (Electrical &amp; Electronic), USM.</p>	Micro Controller, Embedded System Design	RFID Wireless Sensor Network Taste Sensing System Wireless System Design. Remote Monitoring and Control System.
 <p><b>Mohamad Rosyidi b. Ahmad</b> <i>Programme Coordinator</i> <i>Lecturer</i> M.Eng. (Electrical Power), UTM. B.Eng. (Hons.) (Electrical Electronics), UTM.</p>	Electrical Power	Electrical Power
 <p><b>Mohd Fauzi b. Alias</b> <i>Lecturer</i> M.Sc. (Electrical &amp; Electronic), USM. B.Eng. (Hons.) (Electrical &amp; Electronic), USM.</p>	PLC Automation, Electrical and Electronics, Digital Image Processing, Machine Vision	Automation, Image Processing and Machine Vision, Mobile Robot Vision System
 <p><b>Nor Haslina bt. Ibrahim</b> <i>Lecturer</i> M.Sc. (IT) Computer Science, UKM. B.Sc. (Hons.) (Information Technology, UiTM).</p>	Computing	Computing
 <p><b>Nurul Husna binti Hassan</b> <i>Lecturer</i> MSc. Teaching of Mathematics, USM. BSc. (Hons.) Industrial Mathematics, UTM.</p>	Calculus, Algebra, Differential Equation	Differential Equations, Ecosystem Modelling
 <p><b>Norasrani binti Ramli</b> <i>Lecturer</i> MSc. Mathematics, USM. BSc. (Hons.) Mathematics, USM.</p>	Pure Mathematics, Calculus, Algebra, Differential Equation	Computer Aided Geometric, Design Mathematics
 <p><b>Julaida bt. Abdul Jalil</b> <i>Programme Coordinator</i> <i>Assistant Lecturer</i> B.Sc. (Electrical Eng.), Univ. Of Evansville Indiana, USA. Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	Electrical Power	Electrical Power

## ACADEMIC STAFF – ELECTRICAL, ELECTRONIC AND AUTOMATION SECTION

ACADEMIC STAFF	SPECIALISATION	RESEARCH AREA
 <p><b>Ts. Mohd Izwan b. Mamat</b>  <b>Head of Industrial Linkages</b>  <i>Assistant Lecturer</i>            B.Eng. (Hons.) (Electrical &amp; Electronics),            Universitaire de Nice Sophia Antipolis, France.            Dip. (Technology Electrical, Electronic and IT            Communication), IUT de Nice France.            DET (Automated System &amp; Maintenance), MFI.</p>	Industrial Automation and Mechatronics	Automation and Mechatronics
 <p><b>Shaifuladi b. Shaharuddin</b>  <b>Head of Quality Assurance</b>  <i>Assistant Lecturer</i>            B.Eng. (Hons.) (Electrical &amp; Electronics),            Universitaire de Nice Sophia Antipolis, France.            Dip. (Technology Electrical, Electronic and IT            Communication), IUT de Nice France            DET (Electrical Equipment &amp; Installation), MFI.</p>	Electrical Power and Mechatronics	Industrial Automation and Control System
 <p><b>Saharul b. Arof</b>  <i>Assistant Lecturer</i>            B.Tech. (Mechatronics), (KUITTHO).            Dip. (Industrial Electronics), GMI.            Cert. (Automotive Eng. Tech.), IMH, Spain.</p>	Automation and Control	Automation and Control

## ACADEMIC STAFF – ENGINEERING SECTION

ACADEMIC STAFF		SPECIALISATION	RESEARCH AREA
	<p><b>Prof. Ir. Ts. Dr. Ishak Bin Haji Abdul Azid</b>  <i>Professor</i>  <b>Head of Section</b>            Ph.D. +(Structural Optimization), University Of Wales, Cardiff, UK.            M.Sc. (Civil Eng.), University of Wales, Swansea, UK            B.Sc. (Hons.) (Mechanical Eng.), Clarkson University, USA</p>	Structural and thermal analysis, Finite Element Analysis, Engineering Optimization, Process Improvement	Process Improvement, Thermal Stress, FEA, Optimization, Automotive Technology
	<p><b>Ir. Dr. Mohd. Nizam bin Ahmad</b>  <b>Dean/Head of Campus</b>  <i>Senior Lecturer</i>            Ph.D. (Mechanical Engineering) – Biomechanics, USM            M.Sc. (Mechanical Eng.), USM.            B.Eng. (Hons.) (Mechanical Eng.), USM.</p>	Biomechanics, Frictions in Orthodontics, Product & Mechanical Design, Finite Element Analysis, Structural Analysis.	Biomechanics Studies, Application of NiTi Shape Memory Alloy, Mechanical Design & Experimental Works, Structural Optimization.

## ADVISORY SYSTEM/ MENTOR-MENTEE/ PROBATIONARY SYSTEM

### Introduction

Universiti Kuala Lumpur has an Academic Advisory scheme to provide guidance and support to students, thereby creating a conducive and caring environment for students to excel in his/her academic pursuits. In this scheme, each lecturer will assume a leading and pro-active role of an academic advisor. Every student will be able to benefit from this scheme towards the objective of achieving a good university education and success in future endeavours. Students can seek friendly informed advice and guidance in areas of their studies, such as course structure, course registration, time management, etc. from their respective advisors. This scheme can also be a means for students to propel themselves to greater heights by tapping into the enormous resource of talent and expertise right at their doorstep.

#### Academic Advisor's Roles

1. Monitoring academic progress in means of ensure that students has fulfil their study plan upon completion of study.
2. Clarification of academic and institutional policies that has been outline in the University Rules and Regulation Handbook as well as the Academic Affair procedures.
3. Assistance with academic issues
  - a. Meet the students under his/her supervision regularly individually or in group.
  - b. Monitor students' academic performance, individually or in-group.
  - c. Assist the students on the necessary requirements in completing their academic programme.
  - d. Assist students, whenever possible in their academic problems and able to help them to seek the necessary guidance.
  - e. Liaise with subject lecturer and program Head of Section/Program Coordinator on the progress of an individual student or in-group especially to those who are in KP status.
  - f. Formulate action plans on improving students' performance.
  - g. Provide feedback to the program Head of Section/Program Coordinator on the students' progress whenever required.
4. Navigation within the campus environment.

#### What to Expect of Your Advisor?

##### Students have a right to expect their advisor to:

- Have posted reasonable office hours of availability throughout the academic semester.
- Maintain appointments with students on a timely basis.
- Be knowledgeable about educational program requirements, curriculum, and professional and career opportunities within their field of expertise.
- Be knowledgeable about academic requirements, institutional policies and procedures to ensure academic success.
- Seek information they do not know or refer you to the appropriate campus resources as needed.

#### What Your Advisor Expects of You

##### Students have a responsibility to:

- Read and understand the academic policies and procedures contained in official Universiti Kuala Lumpur publications and on its online services, ECITIE ([www.online.unikl.edu.my](http://www.online.unikl.edu.my)).
- Consult with their advisors during registration periods for subjects scheduling and any program modification.
- Inform their advisor of any academic difficulties, program or career changes
- Maintain scheduled appointments with their advisors and be prepared for advisement sessions with any supporting documentation or materials which could assist the advisor
- Provide advisors with feedback and follow through on advisor recommendations as needed

## ADMISSION REQUIREMENTS

### MINIMUM REQUIREMENTS TO REGISTER IN DIPLOMA PROGRAMME

#### MINIMUM ENTRY REQUIREMENTS FOR DIPLOMA OF ENGINEERING TECHNOLOGY PROGRAMME

- Pass in SPM or its equivalent with at least **credit in three (3) subjects** (minimum Grade C) including Mathematics and Natural Sciences or Technical Based Subjects; **OR**
- Accredited Certificate in Engineering, Engineering Technology, Technical or Malaysian Skills Certificate **Level 3 with PT3** or equivalent; **OR**
- Recognized related Technical/Vocational/Skills qualifications AND an adequate and relevant bridging programme, **OR**
- Pass in O-Level with minimum **Grade C** in three (3) subjects including Mathematics and science or technical based subjects, **OR**
- Pass in Sijil Kemahiran Malaysia (SKM) (**MQF Level 3**) qualification been recognized by Jabatan Pembangunan Kemahiran (JPK), government of Malaysia and according to approval by UniKL Senate, **OR**
- Pass in Sijil Vokasional Malaysia (SVM) qualification been recognized by government of Malaysia and according to approval by UniKL Senate, **OR**
- Pass Technical/Vocational/Skills qualifications and recognized and approve by UniKL Senate, **OR**

Other recognized equivalent qualification by Malaysian Government

## ADMISSION REQUIREMENTS

### MINIMUM REQUIREMENTS TO REGISTER IN BACHELOR PROGRAMME

#### MINIMUM ENTRY REQUIREMENTS FOR BACHELOR OF ENGINEERING TECHNOLOGY PROGRAMME

- Pass in Sijil Tinggi Persekolahan Malaysia (STPM) / Matriculation or its equivalent, with **minimum CGPA 2.0** and at least **Grade C** in Mathematics and one relevant Science subject; **OR**
- Recognized Diploma in Engineering or Engineering Technology or equivalent with minimum **CGPA 2.0**; **OR**
- Recognized related Technical/ Vocational/ Skills Diploma with **minimum CGPA 2.0**; **OR**
- Pass in A-Level with minimum **Grade D** in Mathematics and one (1) relevant Science subject; **OR**
- Pass in Sijil Tinggi Agama Malaysia (STAM) with minimum grade of Jayyid **minimum Grade C (CGPA 2.0)** in Mathematics and one relevant Science subject or equivalent: **OR**
- Pass in International Baccalaureate (IB) with **at least 24 points**; **OR**
- Pass in Diploma Kemahiran Malaysia (DKM)/ Diploma Lanjutan Kemahiran Malaysia (DLKM)/ Diploma Vokasional Malaysia (DVM) with a **minimum CGPA of 2.50** subject to the approval of the Senate/ Academic Board of the relevant institution; **OR**
- Pass in the DKM/DLKM/DVM with a **minimum CGPA of 2.00** AND have **at least two (2) years** of work experience in the related field.

#### MINIMUM ENTRY REQUIREMENTS FOR BACHELOR OF ENGINEERING PROGRAMME

- Pass in Sijil Tinggi Persekolahan Malaysia (STPM) / Matriculation or its equivalent with a **minimum CGPA of 2.00** and a **grade of C** in Mathematics and one (1) of the Physical Science subjects (i.e; Chemistry, Physics, and etc); **OR**
- Pass in Diploma Kemahiran Malaysia (DKM)/ Diploma Lanjutan Kemahiran Malaysia (DLKM)/ Diploma Vokasional Malaysia (DVM) with a **minimum CGPA of 2.50** subject to the approval of the Senate / Academic Board of the relevant institution; **OR**
- Pass in the DKM/DLKM/DVM with a **minimum CGPA of 2.00** AND have at least two (2) years of work experience in the related field; **OR**
- Pass in A-Level with **minimum Grade D** in Mathematics and one (1) of the Physical Science subjects (i.e; Chemistry or Physic); **OR**
- Pass in International Baccalaureate Diploma (IBD) with **minimum of 24 points** and attained a **minimum score of 4** in Mathematics and one (1) of the Physical Science subjects (i.e; Chemistry, Physic and etc); **OR**
- Pass in Sijil Tinggi Agama Malaysia (STAM) with minimum grade of Jayyid and pass SPM or equivalent with **minimum CGPA 2.00** with minimum Grade C in Mathematics and one relevant Physical Science subjects (i.e; Chemistry, Physic and etc); **OR**
- Pass in Diploma (Level 4, KKM) related to Engineering/ Engineering Technology fields from higher education provider recognized by Government of Malaysia with a **minimum CGPA 2.00**, **OR**
- Passed in other equivalent qualification recognized by Government of Malaysia.

**MINIMUM ENTRY REQUIREMENTS FOR BACHELOR OF BUSINESS TECHNOLOGY PROGRAMME**

- Pass in Sijil Tinggi Persekolahan Malaysia (STPM) with a **minimum Grade C** (2.0) in any two (2) subjects, and a pass in Mathematics and English at SPM or any equivalent qualification, **OR**
- Pass in Sijil Tinggi Agama Malaysia (STAM) with **minimum grade of Jayyid** and a pass in Mathematics and English at SPM; **OR**
- Pass in Matriculation/Foundation with a **minimum CGPA 2.00** out or any equivalent qualification, **OR**
- Pass the DKM/ DLKM/ DVM with a **minimum CGPA of 2.00** AND have at least two (2) years of work experience in the related field **OR**
- Pass in Diploma Kemahiran Malaysia (DKM)/ Diploma Lanjutan Kemahiran Malaysia (DLKM)/ Diploma Vokasional Malaysia (DVM) with a **minimum CGPA of 2.50** subject to the approval of the Senate/ Academic Board of the relevant institution: **OR**
- Pass in A-Level with **minimum Grade D** in any two (2) subjects, and a pass in Mathematics and English at O-Level, or any equivalent qualification, **OR**
- Pass in International Baccalaureate (IB) with **at least 24 points**; **OR**
- Any qualifications equivalent to Diploma or Advanced Diploma (**Level 4 or Level 5, KKM**).

# GRADING SYSTEM

## PASSING GRADE

The general passing grade in all subjects is D and above except for Industrial Training and Co-Curriculum. Meanwhile, the passing grade for all Regulatory Compulsory (Mata Pelajaran Umum) subjects is Grade C. However, the University, with the endorsement of the Senate, allows subjects to have different passing grade as per required by the programme or the professional body or the certification board.

A student's performance in a subject is reflected by the grade received.

*Table 1: Grade and Point Value for courses other than Industrial Training*

*Table 2: Grade and Point Value for Industrial Training*

Table 1: Grade and Point Value for courses other than Industrial Training			
Mark	Grade	Point Value	Status
80 – 100	A	4.00	
75 – 79	A-	3.67	
70 – 74	B+	3.33	
65 – 69	B	3.00	
60 – 64	B-	2.67	Pass
55 – 59	C+	2.33	
50 – 54	C	2.00	
45 – 49	C-	1.67	
40 – 44	D	1.00	
00 – 39	F	0.00	Fail

Table 2: Grade and Point Value for courses other than Industrial Training			
Mark	Grade	Point Value	Status
80 – 100	M	Merit	Pass
50 – 79	S	Satisfactory	Pass
00 – 49	F	Fail	Fail

## GRADE POINT AVERAGE (GPA)

The Grade Point Average (GPA) is defined as the total grade point received by a student in a semester divided by the number of credit hours/ credit counted in that particular semester.

Semester Grade Point

Total Credit Hours / Credit calculated for that semester

## CUMULATIVE GRADE POINT AVERAGE (CGPA)

The Cumulative Grade Point Average (CGPA) is defined as the sum of all the semesters' grade points divided by the total credit hours counted for all semesters in which the student had registered for.

Total Semester Grade Points for All Semester  
Total Credit Hours/ Credit calculated for all semesters

## RE-SIT TO GRADUATE

A final semester student may apply to re-sit maximum of two failed courses taken at the last semester of his study or failed at the semester just before his industrial training. The student must be in good standing and his coursework marks for the failed course(s) must be = 40% of his total coursework marks. However, if he fails the re-sit to graduate exam, the student will need to repeat the course.

## SUPPLEMENTARY

Supplementary Paper is unique to UniKL RCMP only in order to accommodate the clinical training of the students. Students who failed a course are allowed to re-sit immediately after results announcements.

Academic Offences is actions which would have the effect of unfairly promoting or enhancing one's academic standing community at an Institute of University Kuala Lumpur.

There are two categories of academic offences.

- a. Academic Misconducts
- b. Examination Misconducts

## ACADEMIC MISCONDUCT

The Academic Misconducts are listed below, however the list is not exhaustive.

- I. Plagiarism – an act or instance or closely imitating the language and thoughts of another author without authorization and the representation of that author's work as one's own, as by not crediting the original author.
- II. Collusion – when a student or students collaborate with another student or students as an individual or group with the intention of cheating to gain mark or grade to which they are not entitled.
- III. Fraud and Forgery – commission of fraud and forgery include but not limited to falsification of University academic records.
- IV. Abuse of Resources – Infringing upon the right of other students to fair and equal access to any University library materials and comparable or related academic resources.

## EXAMINATION MISCONDUCTS

Examination misconducts is any attempt by a student to give or obtain assistance in a formal academic assessment exercise without the knowledge of the organizer. Examination misconduct may include possessing any unauthorized materials or devices, giving or receiving or in possession of materials related to the assessment, referring and using prohibited references and communicating with other exam candidates. If a student is found to have committed examination misconducts, he/she will be suspended or terminated.

# EXTERNAL PANEL UniKL-MSI PROGRAMMES

# EXTERNAL EXAMINER/INDUSTRIAL ADVISORY PANEL/PROGRAMME ADVISORY COMMITTEE

## INTRODUCTION

### EXTERNAL EXAMINER (EE)/ INDUSTRIAL ADVISORY PANEL (IAP)

Each programme has established an External Examiner (EE) and Industry Advisory Panel (IAP) consisting of academic and industry experts who provide strategic advice on our education and research activities and senior academics. Our academic and industry panel members are highly valued for their academic experience and external industry perspective and also their contribution in promoting and strengthening academic-industry collaboration.

### OBJECTIVES of EE/IAP

1. To evaluate the quality on the programme offered with respect to curriculum, teaching & learning activities and facilities, human resource, management system, library facilities and other related facilities.
2. To evaluate the examination, process and management.
3. To evaluate the appropriateness of examinations questions, to verify the appropriateness of the examinations marking schemes.
4. To recommend improvements on programme implementation, conduct and management of examination, examinations questions and the marking schemes.
5. To submit a detailed type-written report to the Dean/Head of Campus providing his/her assessment based on the above criteria. Handwritten reports will not be accepted.

## BACHELOR PROGRAMMES

**Bachelor of Engineering Technology (Hons) in Mechanical (Automotive)****External Examiner (EE)**

**External Examiner**  
**Prof. Ir. Dr. Shahrir Abdullah**  
*Universiti Kebangsaan Malaysia (UKM)*

**Industrial Advisory Panel (IAP)**

**Omar bin Md. Noh**  
*Business Development Manager -  
 Antenna Co. Ltd*

**Sharul Faizal bin Sharudin**  
*Senior Manager*  
*Perusahaan Otomobil Kedua Sdn Bhd  
 (Perodua)*

**Bachelor of Mechatronics Engineering Technology (Automotive) with Honours****External Examiner (EE)**

**Prof. Ir. Dr. Nor Ashidi Mat Isa**  
*Universiti Sains Malaysia (USM)*

**Industrial Advisory Panel (IAP)**

**Mohamad Nasrul bin Abdul Satar.**  
*R&D Staff Engineer*  
*Continental Automotive Malaysia*

**Suhaimi bin Ishak**  
*Assistant Manager*  
*Showa Denko HD (M) Sdn Bhd*

**Bachelor of Engineering Technology (Hons) in Manufacturing (Automotive)****External Examiner (EE)**

**Prof. Dr. Shamsuddin bin Sulaiman**  
*Universiti Putra Malaysia (UPM)*

**Industrial Advisory Panel (IAP)**

**Mohd Fadhli Suib**  
*Senior Project Manager/ Engineer*  
*Continental Automotive Malaysia*

**Fouzun Naseer bin M N Mohd Yusoff -**  
*(Program Director for Market and  
 Industry Development - Collaborative  
 Research in Engineering, Science and  
 Technology (CREST))*

**Mohamad Sohaifol Soid**  
*Production Manager Human Machine  
 Interface (HMI)*  
*Continental Automotive Malaysia Sdn.  
 Bhd)*

**Bachelor of Engineering Technology (Hons) in Mechanical Design****External Examiner (EE)**

**Assoc. Prof. Ir. Dr. Mokhtar Awang**  
*Universiti Teknologi Petronas (UTP)*

**Industrial Advisory Panel (IAP)**

**Mohd. Zaidi Ahmad**  
*Engineering Section Manager*  
*MOTOROLA Solutions (M) Sdn Bhd*

**Omar bin Md. Noh**  
*Business Development Manager*  
*Antenna Co. Ltd*

**Bachelor of Engineering Technology (Hons) in Applied Electronics**

**External Examiner (EE)**

**Assoc. Prof. Ir. Dr. Arjuna Bin Marzuki**  
*Universiti Sains Malaysia (USM)*

**Industrial Advisory Panel (IAP)**

**Ismail Bin Umar**  
*Senior Engineer*  
*Infineon Technologies (Kulim) Sdn Bhd*

**Murasoliselvan Karunanithi**  
*Technical Delivery Program Manager*  
*UST Global, Penang, Malaysia.*

**Bachelor of Mechanical Engineering with Honours**

**External Examiner (EE)**

**Ir. Prof. Dr. Mohd Zulkifly bin Abdullah**  
*Universiti Sains Malaysia (USM)*

**Industrial Advisory Panel (IAP)**

**Ir. Mukridz Md Mohtar**  
*R&D Mechanical Staff Engineer*  
*Continental Automotive Instruments*  
*Malaysian Sdn Bhd*

**Ir. Aziz Bin Kader**  
*Head of Engineering & Maintenance*  
*Schott Glass (Malaysia) Sdn Bhd*

**Ir. Dr. Mui Kai Yin**  
*Trainer*  
*Career Growth Sdn Bhd*

**Bachelor of Business Technology (Honours) in Automotive Management**

**External Examiner (EE)**

**Assoc. Prof. Dr. Yusuf Hj Othman**  
*International Islamic University Malaysia (IIUM)*

**Assoc. Prof. Dr. Shuhymee Ahmad**  
*Universiti Utara Malaysia (UUM)*

**Industrial Advisory Panel (IAP)**

**Adi Shahril Abd Rais**  
*Maypartners & Consultancy Sdn Bhd*

**Shahril Hashim**  
*Perodua Sales Sdn Bhd*

## DIPLOMA PROGRAMMES

**Diploma of Engineering Technology in  
Mechanical Design and Development****External Examiner (EE)**

**Dr. Muhad Rozi Mat Nawi**  
*Universiti Teknologi MARA (UiTM)*

**Industrial Advisory Panel (IAP)**

**Ir. Jailani b. Besar**  
*Manager*  
*Proton Sdn Bhd*

**Mohd Imran Ibrahim**  
*AHAR Consultants PLT*

**Diploma of Engineering Technology in  
Production****External Examiner (EE)**

**Mohzani Mokhtar**  
*Universiti Sains Malaysia (USM)*

**Industrial Advisory Panel (IAP)**

**Mazwan bin Noor**  
*General Manager*  
*Syarikat Hang Tuah*

**Ahmad Kamil bin Fadzil**  
*Engineer*  
*Toyota Assembly Services Sdn. Bhd*

**Diploma of Engineering Technology in  
Electromechanical Installation and Maintenance****External Examiner (EE)**

**Dr. Ali Sophian**  
*International Islamic University*  
*Malaysia (IIUM)*

**Industrial Advisory Panel (IAP)**

**Wan Ahmad Syahrizan Rozli bin Wan Ali**  
*HSE Manager*  
*Subsea7 Malaysia Sdn Bhd*

**Diploma of Electronic Engineering Technology  
(Industrial Automation and Control)****External Examiner (EE)**

**Ts. Dr. Abdul Halim bin Ismail**  
*Universiti Malaysia Perlis (UniMAP)*

**Industrial Advisory Panel (IAP)**

**Mohd Haidar Bin Md Hamzah**  
*Senior Engineer*  
*Intel PSG (formerly known Altera)*

**Mohd Azad Faris Bin Adam**  
Senior Production Engineer  
MS Elevators Sdn.Bhd

**Hasrul Kushairi Bin Hasni**  
Embedded Test Delivery Manager  
UST Global (Malaysia) Sdn. Bhd.

FOUNDATION PROGRAMME

Foundation in Engineering for Spanish Universities

Programme Academic Committee

**Salwani Abu Bakar**  
Head of Section Pre-University &  
General Studies  
German Malaysian Institute (GMI)

MASTER PROGRAMME

Master of Business Technology

Programme Assessor

**Professor Dr. Noorliza Karia**  
Operations Section,  
School of Management,  
Universiti Sains Malaysia (USM)

Programme Assessor

**Professor Dr. Sofri Bin Yahya**  
Graduate School of Business  
Universiti Sains Malaysia (USM)

Programme Assessor

**Assoc. Pro. Dr. Mohd Faizal Mohd Isa**  
Human Resource Department  
School of Business Management  
College of Business,  
Universiti Utara Malaysia (UUM)

Industrial Advisory Panel

**Mr. Nazri Bin Ismail**  
Head Commercial & Stakeholders  
Management Division.  
Penang Port Sdn Bhd

# FOUNDATION PROGRAMME

## **S50 - FOUNDATION IN ENGINEERING FOR SPANISH UNIVERSITIES (PRE-SPAIN)**

### **BACKGROUND**

In response to the rapidly increasing industrial demand, a collaborative effort between the Malaysian and Spanish government gave birth to UniKL MSI. Since August 2002, UniKL MSI which is located in Kulim Hi-Tech Park, Kedah offers automotive engineering programme with the combination of theoretical training and practical application. This programme is Self-Sponsored and also Young Talent Development Programme (YTP). In July 2008, UniKL MSI launched a Pre-Spain Programme under MARA sponsorship. The Pre-Spain Programme is which is using 100% Edexcel A-level system with an additional subject in Spanish. Students, who have completed 2 years of Pre-Spain Program at UniKL MSI are eligible for entrance into any field of engineering courses at three of the most established and prestigious universities in Spain.

The Pre-Spain Programme provides its students with professional and dedicated academicians, who are committed towards preparing students to excel in their future undertakings.

### **PROGRAMME DESCRIPTION**

The Pre-Spain Programme is a 2 years foundation programme for students who wish to further their studies at Spanish Universities. This Programme is fully sponsored by MARA under “Programme Ijazah Luar Negara (PILN)” especially for selected students who have achieved excellent results in Sijil Pelajaran Malaysia (SPM). This program also opens to private candidate (self-sponsored) who wish to pursue bachelor’s degree in engineering in Spain.

At UniKL MSI, the students need to sit for the GCE International Advance Level Examination EDEXCEL (JCQ: Joint Council for Qualifications) for subjects such as Core Mathematics, Mechanics, Physics and Chemistry. The exam will consist of 2 stages:

- i. the Advance Subsidiary Level (AS)
- ii. the Advance Level (A2)

Apart from having A-level examination, students are also required to sit for DELE official Spanish examination. This examination will assess the students’ Spanish language proficiency. For MARA sponsored students, they are required to pass the DELE examination with B1 level. The main objective of this Programme is to ensure that students are prepared for entry into tertiary education in various fields of engineering technology in Spain.

## PROGRAMME STRUCTURE AND DESCRIPTION

## Program Educational Objectives (PEOs)

- 1** To produce students who are **knowledgeable** and **competent** in **Science and Technology**.
- 2** To produce students who are capable to apply principles of **Science and Technology** in **problem solving**.
- 3** To produce students who are able to **communicate** effectively verbal and non-verbal either individual or in group.
- 4** To produce students who are committed to the importance of **lifelong learning** and **continuous improvement**.

## Program Learning Outcomes (PLOs)

- 1** Acquire understanding of facts, concept, principles, process and procedures in science and technology.
- 2** Apply knowledge of fundamental principles to identify and solve scientific problems.
- 3** Apply experimental investigations of scientific problems using data from relevant sources individually or in group.
- 4** Practice effective communication and professionalism, with ethics and social responsibility to support their independent study in Spanish Universities.
- 5** Competent in obtaining resources and able to engage in independent and lifelong learning.

# DIPLOMA PROGRAMME

## S01 - DIPLOMA OF ENGINEERING TECHNOLOGY IN MECHANICAL DESIGN AND DEVELOPMENT (DET MDD)

### PROGRAMME STRUCTURE AND DESCRIPTION

#### BACKGROUND

The programme offers the individual with wide knowledge and capabilities in the design for manufacturer of mechanical products, moulds, fixtures and of general parts with an ample knowledge of material and manufacturing.

#### CAREER INFORMATION

The career openings are wide and rewarding for those with the right education and talent. Job opportunities for a high-level technologist exist in all wide range of industries especially in manufacturing sectors as well as research and development sectors. The person would be able to hold positions such as Assistant Engineer, Senior Technician or Technician Modules.

### Program Educational Objectives (PEOs)

- 1 UniKL graduates who are **knowledgeable** and technically **competent** in the field of **mechanical design and development**.
- 2 UniKL graduates who are **effective leaders** and **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of mechanical engineering technology
- 3 UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4 UniKL graduates who are **professional**, **ethical**, and **socially responsible**.
- 5 UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 **Knowledge:** Apply knowledge of **applied** mathematics, **applied science**, engineering fundamentals and engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices in **mechanical design and development**.
- 2 **Problem Analysis:** Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to **mechanical design and development**. (DK1 to DK4)
- 3 **Design/Development of Solutions:** Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations. (DK5).
- 4 **Investigation:** Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurement.
- 5 **Modern Tool Usage:** Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations. (DK6)
- 6 **The Engineer and Society:** Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems. (DK7)
- 7 **Environment and Sustainability:** Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts (DK7)
- 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of technician practice.
- 9 **Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 **Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 **Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of **mechanical design and development**.

3. **MPU 2322 Religious Practices in Malaysia** - For international student only

**S03 - DIPLOMA OF ENGINEERING TECHNOLOGY IN PRODUCTION (DET PET)****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

Produce graduates who have technical knowledge and skills, together with a suitable range of transferable and management skills required to work in a modern manufacturing technology environment upon graduation. Thus, it will provide the graduates with wide knowledge and capabilities in the planning and production control, machine operations in term of preparation, programming and machining. This programme also focuses on practices-oriented education-based which enable students to work independently as manufacturing technologist and provide a strong basis for future career development.

**CAREER INFORMATION**

Graduates will be able to work in vast engineering and manufacturing sector such as Original Equipment Manufacturers (OEM), Manufacturing, Automotive, Semiconductor, Oil and Gas etc. Career prospects are Technologist in the field of Mechanical Engineering and Design such as Mechanical Engineering Technologist, Mechanical Design Engineering Technologist, Manufacturing Engineering Technologist, Product Mechanical Engineering Technologist, Production Engineering Technologist and Marketing Engineering Technologist.

**Program Educational Objectives (PEOs)**

- 1** UniKL graduates who are **knowledgeable** and technically **competent** in the field of **production system**.
- 2** UniKL graduates who are **effective leaders** and **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of production engineering technology
- 3** UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who are **professional**, **ethical**, and **socially responsible**.
- 5** UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 **Knowledge:** Apply knowledge of **applied** mathematics, **applied science**, engineering fundamentals and engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices in **production engineering technology**.
- 2 **Problem Analysis:** Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to **production engineering technology**. (DK1 to DK4)
- 3 **Design/Development of Solutions:** Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations. (DK5).
- 4 **Investigation:** Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurement.
- 5 **Modern Tool Usage:** Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations. (DK6)
- 6 **The Engineer and Society:** Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems. (DK7)
- 7 **Environment and Sustainability:** Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts (DK7)
- 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of technician practice.
- 9 **Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 **Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 **Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of **production engineering technology**.

## S05 - DIPLOMA OF ENGINEERING TECHNOLOGY IN ELECTROMECHANICAL INSTALLATION AND MAINTENANCE (DET EIM)

### PROGRAMME STRUCTURE AND DESCRIPTION

#### BACKGROUND

UniKL MSI in Electromechanical Installation & Maintenance program bridges this gap with an interdisciplinary approach to problem solving in a design and manufacturing environment where the challenges are both mechanical and electrical. The Diploma of Engineering Technology in Electromechanical Installation & Maintenance programme at UniKL MSI prepares graduates with the technical skills for rewarding careers in their chosen discipline: the application, installation, manufacturing, operation and/or maintenance of electrical/electronic systems. Other than instructing students in the latest electrical and electronic technology, computer application software, laboratory equipment, and the operation of electronic systems, the programme also exposes them to critical thinking skills, analyzing and solving technical problems and the use of information acquisition tools.

#### CAREER INFORMATION

The career openings are wide and rewarding for those with the right education and talent. Job opportunities for a high-level technologist exist in all wide range of industries especially in manufacturing sectors as well as research and development sectors. The person would be able to hold positions such as Assistant Engineer, Senior Technician or Technician Modules.

### Program Educational Objectives (PEOs)

- 1 UniKL graduates who are **knowledgeable** and technically **competent** in the field of **electromechanical installation and maintenance**.
- 2 UniKL graduates who are **effective leaders** and **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of electromechanical engineering technology
- 3 UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4 UniKL graduates who are **professional**, **ethical**, and **socially responsible**.
- 5 UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 **Knowledge:** Apply knowledge of **applied** mathematics, **applied science**, engineering fundamentals and engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices in **electromechanical installation and maintenance**.
- 2 **Problem Analysis:** Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to **electromechanical installation and maintenance**. (DK1 to DK4)
- 3 **Design/Development of Solutions:** Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations. (DK5).
- 4 **Investigation:** Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurement.
- 5 **Modern Tool Usage:** Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations. (DK6)
- 6 **The Engineer and Society:** Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems. (DK7)
- 7 **Environment and Sustainability:** Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts (DK7)
- 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of technician practice.
- 9 **Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 **Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 **Lifelong Learning:** Recognise the need for and have the ability to engage in independent updating in the context of **electromechanical installation and maintenance**.

## S06 - DIPLOMA OF ELECTRONIC ENGINEERING TECHNOLOGY (INDUSTRIAL AUTOMATION AND CONTROL) (DEET IAC)

### PROGRAMME STRUCTURE AND DESCRIPTION

#### BACKGROUND

The programme offers the individual with wide knowledge and capabilities in current distribution installation, control programs of electro technical automation equipment, control and regulation system of machines or industrial processes.

#### CAREER INFORMATION

The career openings are wide and rewarding for those with right education and talent job opportunities for a high-level technologist exist in all industrial companies that operate in an automation system. The person would be able to hold positions such as Assistant Engineer, Senior Technician or Technician.

### Program Educational Objectives (PEOs)

- 1 UniKL graduates who are **knowledgeable** and technically **competent** in the field of **electronics, automation and control**
- 2 UniKL graduates who are **effective leaders** and **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of electronics, automation and control engineering technology
- 3 UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4 UniKL graduates who are **professional, ethical, and socially responsible**.
- 5 UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

# BACHELOR PROGRAMME

## S11 - BACHELOR OF ENGINEERING TECHNOLOGY (HONS) IN MECHANICAL (AUTOMOTIVE) (BETA MECHANICAL)

### PROGRAMME STRUCTURE AND DESCRIPTION

#### BACKGROUND

This programme is a combination of mechanical and automotive engineering. Mechanical engineering is an engineering discipline that involves the application of principles of physics for analysis, design, manufacturing, and maintenance of mechanical systems. During the study, students will be given a solid understanding of key concepts including:

- Static and dynamics
- Strength of materials and solid mechanics
- Instrumentation and measurement
- Automotive engineering
- Thermodynamics, heat transfer, energy conversion & refrigeration/air conditioning
- Fluid mechanics/fluid dynamics
- Mechanism design (including kinematics and dynamics)
- Manufacturing technology or processes
- Hydraulics and Pneumatics
- Engineering Design
- Mechatronics and/or control theory
- Drafting, CAD (usually including solid modeling), and CAM

#### CAREER INFORMATION

Mechanical engineers provide efficient solutions to the development of processes and products, ranging from small component designs to extremely large plant, machinery, or vehicles. They can work on all stages of a product, from research and development to design and manufacture, through to installation and final commissioning. Most industries rely on a form of mechanical systems and mechanical engineering is thought to be one of the most diverse of all engineering disciplines. There are employment opportunities available in a wide range of sectors, such as the manufacturing, automotive and industrial engineering. Mechanical engineers can also be involved in the management of people and resources, as well as the development and use of new materials and technologies.

## Program Educational Objectives (PEOs)

- 1** UniKL graduates who are highly **knowledgeable** and **technically competent** in the field of **mechanical and automotive**
- 2** UniKL graduates who are **effective leaders** with **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of **mechanical and automotive engineering technology**
- 3** UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who are **professional, ethical, and socially responsible**.
- 5** UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

1

**Knowledge:** Apply knowledge of mathematics, science, mechanical engineering fundamentals and automotive fundamentals to define and applied engineering procedures, process, systems or methodologies.

2

**Problem Analysis:** Identify, formulate, research literature, modelling, simulate and solve broadly defined engineering problems reaching substantiated conclusions using appropriate analytical tools related to mechanical and automotive engineering technology

3

**Design/ development of solutions:** Design solutions for broadly defined engineering technology problems and contribute to the design of systems, components or process to meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.

4

**Investigation:** Conduct investigations of broadly defined problems: locate, search and select relevant data from codes, data bases and literature, design and conduct experiments to provide valid conclusion.

5

**Modern Tool Usage:** Select and apply appropriate techniques, resources and modern engineering tools, including prediction and modelling to broadly-defined engineering activities, with an understanding of the limitations.

6

**The Engineer and Society:** Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities and norms of engineering technology practice.

7

**Environment and Sustainability:** Understand the impact of engineering solutions in a societal context and demonstrate knowledge of and the need for sustainable development.

8

**Ethics:** Understand and commit to professional ethics and responsibilities and norms of engineering technology practice.

9

**Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.

10

**Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.

11

**Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.

12

**Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of specialised technical knowledge.

## S22 - BACHELOR OF MECHATRONICS ENGINEERING TECHNOLOGY (AUTOMOTIVE) WITH HONOURS (BETA MECHATRONICS)

### PROGRAMME STRUCTURE AND DESCRIPTION

#### BACKGROUND

The mechatronics concept established basic principles for a contemporary engineering design methodology. In this methodology, engineering products and processes have components that require manipulation and control of dynamic (moving) construction to the required high degree of accuracy. Also, the design process requires integrating enabling technologies such as information technology and control engineering. A key factor for the design process involves integrating modern microelectronics and the engineering of software into mechanical and electromechanical systems. This programme is a combination of electrical engineering and automotive engineering. During the study, students will be given a solid understanding of the core areas which include:

- Electric and electronic circuits
- Computer programming
- Control system theory
- Automotive electric and electronic system
- Electronics instrument and measurement technology
- Microcontroller interfacing
- Digital signals processing
- Power Electronics and drive
- Hybrid vehicle system
- Automotive engineering

#### CAREER INFORMATION

Mechatronics graduates are in great demand as industries seek to apply for evolutionary advances in computers, electronics, sensors, and actuators to improve their products, processes, and services. Graduates are in demand wherever there is potential for improvement in the integration of computer and electrical hardware with mechanical systems. Mechatronics graduates can work in any company that develops designs or manufactures and markets “smart” devices. Opportunities exist in manufacturing, sales and as well as research. Mechatronic devices have crept into everyday life.

## Program Educational Objectives (PEOs)

- 1** UniKL graduates who are **knowledgeable** and technically **competent** in the field of **mechatronics and automotive**
- 2** UniKL graduates who are **effective leaders** and **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of mechatronics and **automotive engineering technology**.
- 3** UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who are **professional, ethical, and socially responsible**.
- 5** UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 **Knowledge:** Apply knowledge of mathematics, science, mechatronics engineering fundamentals and automotive fundamentals to define and applied engineering procedures, process, systems or methodologies.
- 2 **Problem Analysis:** Identify, formulate, research literature, modelling, simulate and solve broadly-defined engineering problems reaching substantiated conclusions using appropriate analytical tools related to mechatronics and automotive engineering technology.
- 3 **Design/ development of solutions:** Design solutions for broadly defined engineering technology problems and contribute to the design of systems, components or process to meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4 **Investigation:** Conduct investigations of broadly defined problems: locate, search and select relevant data from codes, data bases and literature, design and conduct experiments to provide valid conclusion.
- 5 **Modern Tool Usage:** Select and apply appropriate techniques, resources and modern engineering tools, including prediction and modelling to broadly-defined engineering activities, with an understanding of the limitations.
- 6 **The Engineer and Society:** Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities and norms of engineering technology practice.
- 7 **Environment and Sustainability:** Understand the impact of engineering solutions in a societal context and demonstrate knowledge of and the need for sustainable development.
- 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of engineering technology practice.
- 9 **Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 **Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 **Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of specialised technical knowledge.

**S13 - BACHELOR OF ENGINEERING TECHNOLOGY (HONS) IN  
MANUFACTURING (AUTOMOTIVE) (BETA MANUFACTURING)****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

All products from aircraft and automobiles to computers and toys must be manufactured. Manufacturing engineering encompasses the science and art of making quality products at a reasonable cost. It is multi-disciplinary field including elements of mechanical engineering, industrial engineering, materials science and electrical engineering. This programme is a combination of manufacturing engineering and automotive engineering. During the study, the student will be given a solid understanding of the core areas which include:

- Manufacturing processes
- Manufacturing planning
- Quality control
- Tool design
- Robotics
- Computer Aided Design
- Computer Aided Manufacturing
- Automotive engineering

**CAREER INFORMATION**

Manufacturing jobs cover nearly everything involved in developing a product, from selecting the appropriate materials to choosing the correct machinery to manufacture the product. Most manufacturing engineers work for equipment manufacturers, aerospace companies, utilities, material processing plants, transportation companies, and petroleum companies. They also work with small firms, consulting practices, universities, and government research labs. Specific assignments might involve research and development, the design of equipment or systems, supervision of production, plant engineering, administration, sales engineering, the testing and evaluation of machines and entire plants.

## Program Educational Objectives (PEOs)

- 1** UniKL graduates who are **knowledgeable** and technically **competent** in the field of **manufacturing and automotive**.
- 2** UniKL graduates who are **effective leaders** and **teamwork skills**, as well as verbal and non-verbal **interpersonal communication skills** to support their role in the field of manufacturing and automotive engineering technology.
- 3** UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who are **professional**, **ethical**, and **socially responsible**.
- 5** UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 **Knowledge:** Apply knowledge of mathematics, science, manufacturing engineering fundamentals and automotive fundamentals to define and applied engineering procedures, process, systems or methodologies.
- 2 **Problem Analysis:** Identify, formulate, research literature, modelling, simulate and solve broadly defined engineering problems reaching substantiated conclusions using appropriate analytical tools related to manufacturing and automotive engineering technology.
- 3 **Design/ development of solutions:** Design solutions for broadly defined engineering technology problems and contribute to the design of systems, components or process to meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4 **Investigation:** Conduct investigations of broadly defined problems: locate, search and select relevant data from codes, data bases and literature, design and conduct experiments to provide valid conclusion.
- 5 **Modern Tool Usage:** Select and apply appropriate techniques, resources and modern engineering tools, including prediction and modelling to broadly-defined engineering activities, with an understanding of the limitations.
- 6 **The Engineer and Society:** Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities and norms of engineering technology practice.
- 7 **Environment and Sustainability:** Understand the impact of engineering solutions in a societal context and demonstrate knowledge of and the need for sustainable development.
- 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of engineering technology practice.
- 9 **Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 **Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 **Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of specialised technical knowledge.

**S14 - BACHELOR OF ENGINEERING TECHNOLOGY (HONS) IN MECHANICAL DESIGN (BET MD)****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

Bachelor of Engineering Technology (Hons) in Mechanical Design (BET MD) aims to assist graduates to become full fledge Mechanical Design Technologist with the required knowledge and technical skills to serve the industry upon graduating. Besides Mechanical Engineering knowledge, students also will have the advantage of specializing in Mechanical Design. Emphasize will be given on components and systems level design to serve the mechanical, manufacturing, semiconductor, electronics, and also oil and gas industry. Students will be exposed on the required knowledge and skills to produce detail Engineering Design that complies with Engineering Standards on safety, reliability and also environment impact. They will also learn to create design which is highly manufactured able and save cost. At early stage of the programme, courses are aligned to expose the students to the basic Mechanical / Manufacturing knowledge. In the middle of the programme students will learn Specialized Design Courses which are relevant to the industry.

**CAREER INFORMATION**

Graduates will be able to work in vast engineering and manufacturing sector such as Original Equipment Manufacturers (OEM), Manufacturing, Automotive, Semiconductor, Oil and Gas etc. Career prospects are Technologist in the field of Mechanical Engineering and Design such as Mechanical Engineering Technologist, Mechanical Design Engineering Technologist, Manufacturing Engineering Technologist, Product Mechanical Engineering Technologist, Production Engineering Technologist and Marketing Engineering Technologist.

## Program Educational Objectives (PEOs)

- 1** UniKL graduates who are **knowledgeable, competent, and innovative** in the field of **mechanical design**.
- 2** UniKL graduates who are **effective leaders** with **teamwork skills**, as well as verbal and non-verbal interpersonal communication skills to support their role in the field of **mechanical design engineering technology**
- 3** UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who are **professional, ethical, and socially responsible**.
- 5** UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 Knowledge:** Acquire and apply the knowledge of mechanical engineering design and technology in design and development of products, components or systems.
- 2 Problem Analysis:** Identify, evaluate and propose new design concepts which are feasible, optimum, solve the design needs and also suitable for manufacturing.
- 3 Design/ development of solutions:** Design solutions for broadly defined engineering technology problems and contribute to the design of systems, components or process to meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4 Investigation:** Conduct investigations of broadly defined problems: locate, search and select relevant data from codes, data bases and literature, design and conduct experiments to provide valid conclusion.
- 5 Modern Tool Usage:** Select and apply appropriate techniques, resources and modern engineering tools, including prediction and modelling to broadly-defined engineering activities, with an understanding of the limitations.
- 6 The Engineer and Society:** Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities and norms of engineering technology practice.
- 7 Environment and Sustainability:** Understand the impact of engineering solutions in a societal context and demonstrate knowledge of and the need for sustainable development.
- 8 Ethics:** Understand and commit to professional ethics and responsibilities and norms of engineering technology practice.
- 9 Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of specialised technical knowledge.

**S15 - BACHELOR OF ENGINEERING TECHNOLOGY (HONS.) IN APPLIED ELECTRONICS (BET AE)****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

Bachelor of Engineering Technology (Hons.) in Applied Electronics (BET AE) course are developed with the intention of providing a platform for individuals to have theoretical and practical skills required by the semiconductor and industrial electronic sectors. This program which is a cross-disciplinary field provides students with knowledge in radio frequency wireless technology, semiconductor, electrical, electronic devices, control system and instrumentation, automation, mechanical, manufacturing process and project management. These are some of the necessary fields required for the electronics industry.

Additionally, students will also be exposed to entrepreneurial skills that will help them developed their own business in future time. This is done by embedding entrepreneur elements in the courses of this programme. With the introduction of Industrialmanship and Teaching Factory it will ensure the students from this programme will not only be skilled in technical aspects but also in entrepreneurship. With the booming of electronics industry in the northern region, the students will have the opportunities to be a global technopreneurs.

**CAREER INFORMATION**

There are employment opportunities available in a wide range of sectors, such as Research and development, Design and Development (System, IC), Product Engineer (Electronic, RF), Process Engineer, Automation Engineer, Electrical Engineer, Electronic Engineer, Service Engineer, Maintenance Engineer, Quality Automation Engineer, Test Automation Engineer.

## Program Educational Objectives (PEOs)

- 1** UniKL graduates who are highly **knowledgeable, competent, and innovative** in the field of applied electronics.
- 2** UniKL graduates who are effective **leaders with teamwork skills**, as well as **verbal and non-verbal interpersonal communication skills** to support their role in the field of applied electronics engineering technology.
- 3** UniKL graduates who are committed towards the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who are **professional, ethical, and socially responsible**.
- 5** UniKL graduates who are capable of embarking on **business** and **technopreneurial activities**

## Program Learning Outcomes (PLOs)

- 1 **Knowledge:** Apply knowledge of mathematics, science, engineering fundamental and applied electronics engineering to define and applied engineering procedures, process, systems or methodologies.
- 2 **Problem Analysis:** Identify, formulate, research literature, modelling, simulate and solve broadly defined engineering problems reaching substantiated conclusions using appropriate analytical tools related to electronics technology
- 3 **Design/ development of solutions:** Design solutions for broadly defined engineering technology problems and contribute to the design of systems, components or process to meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4 **Investigation:** Conduct investigations of broadly defined problems: locate, search and select relevant data from codes, data bases and literature, design and conduct experiments to provide valid conclusion.
- 5 **Modern Tool Usage:** Select and apply appropriate techniques, resources and modern engineering tools, including prediction and modelling to broadly-defined engineering activities, with an understanding of the limitations.
- 6 **The Engineer and Society:** Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities and norms of engineering technology practice.
- 7 **Environment and Sustainability:** Understand the impact of engineering solutions in a societal context and demonstrate knowledge of and the need for sustainable development.
- 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of engineering technology practice.
- 9 **Individual and Teamwork:** Function effectively as an individual, and as a member in diverse technical teams.
- 10 **Communication:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
- 12 **Life Long Learning:** Recognise the need for and have the ability to engage in independent updating in the context of specialised technical knowledge.

**S20 - BACHELOR OF MECHANICAL ENGINEERING WITH HONOURS (BeME)****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

Bachelor of Mechanical Engineering with Honours aims to assist graduates to become full fledged Mechanical Engineers with the required knowledge and technical skills to serve the industry upon graduating. Emphasize will be given on components and systems to serve the mechanical, manufacturing, semiconductor, electronics, solar and also oil and gas industry. The graduates are expected to possess the necessary technical competencies and generic professional skills such as leadership, teamwork, communication, ethical, continuous improvement, lifelong learning, business and technopreneurship in order to be knowledgeable, competent and innovative Mechanical engineers.

**CAREER INFORMATION**

Graduates will be able to work in vast engineering and mechanical sector such as Mechanical engineers research, design, develops, manufacture, and test tools, engines, machines, and other mechanical devices. Engineers in this discipline work on power-producing machines such as electric generators, internal combustion engines and steam and gas turbines. They also work on power-using machines. Some mechanical engineers design tools that other engineers need for their work. In addition, mechanical engineers work in manufacturing or agriculture production, maintenance, or technical sales.

## Program Educational Objectives (PEOs)

- 1** To produce technically **qualified mechanical engineers** who will contribute towards the human capital in the related industry.
- 2** To produce mechanical engineers with the ability to **advance** themselves in **an engineering, technical or academic field**.
- 3** To produce mechanical engineers who **practice professionally**, ethically with social responsibility.
- 4** To produce mechanical engineers who are capable of **embarking on business** and **technopreneurial activities**.

## Program Learning Outcomes (PLOs)

- 1 **Engineering Knowledge:** Apply knowledge of mathematics, science, engineering fundamentals and mechanical engineering to the solution of complex engineering problems;
- 2 **Problem Analysis:** Identify, formulate, research literature and analyse complex mechanical engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences;
- 3 **Design/ development of solutions:** Design solutions for complex mechanical engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations;
- 4 **Investigation:** Conduct investigation into complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions;
- 5 **Modern Tool Usage:** Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex mechanical engineering activities, with an understanding of the limitations;
- 6 **The Engineer and Society:** Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice;
- 7 **Environment and Sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development;
- 8 **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice;
- 9 **Communications:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions;
- 10 **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings;
- 11 **Life Long Learning:** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- 12 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering, entrepreneurship and management principles and apply these to one's own work, as a member or leader in a team, to manage projects and in multidisciplinary environments.

**S21 - BACHELOR OF BUSINESS TECHNOLOGY (HONOURS) IN AUTOMOTIVE MANAGEMENT (BBT AM)****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

The Bachelor of Business Technology (Hons.) in Automotive Management programme aims to produce graduates with business knowledge of automotive management skills and strong entrepreneurial spirit, exemplary leadership skills, high commitment towards pursuit of knowledge and excellence, and innovative, socially responsible and good team players, credential necessary to advance into management level positions. The Bachelor of Business Technology (Honours) in Automotive Management plays a significant role to provide a business education while promoting students to work on commercially driven innovation in entrepreneurship programs.

**CAREER INFORMATION**

Business technologist is a group of services include in technology planning, project management, support, database services, network, management and documentation.

## Program Educational Objectives (PEOs)

- 1 To produce graduates who are **knowledgeable, competent and innovative** in automotive management and entrepreneurship.
- 2 To produce graduates who have **effective leadership** qualities and **communication skills** to support their roles in the industries.
- 3 To produce graduate who are committed towards **lifelong learning** and **continuous improvement**.
- 4 To produce graduate who practice professionalism with **ethics and social responsibility**.
- 5 UniKL graduates who are capable of embarking on **business and technopreneurial** activities.

## Program Learning Outcomes (PLOs)

- 1 Assess in-depth theories and concepts in automotive business.
- 2 Apply in-depth and comprehensive automotive business knowledge to manage complex problems in business organisations using different approaches.
- 3 Organise tasks/operations ethically and flexibly within business organisations.
- 4 Demonstrate effective written and oral communication and collaborative skills with diverse stakeholders.
- 5 Demonstrate relevant digital skills for work/study.
- 6 Analyse numerical and graphical data to assist decision-making in work/study.
- 7 Demonstrate leadership skills and responsibility in managing business organisations.
- 8 Identify self-improvement for academic and career development.
- 9 Demonstrate entrepreneurship skills in resolving business problems.

# MASTER PROGRAMME

**S60 – MASTER OF BUSINESS TECHNOLOGY****PROGRAMME STRUCTURE AND DESCRIPTION****BACKGROUND**

Business Technology master programs are designed to prepare students for a wide range of careers in the public and private sectors, often building on undergraduate studies in engineering, math, and the sciences. Masters programs in business technology combine engineering knowledge with business skills. For those who earn business technology master degree, there may be exciting careers in areas such as resource business management, public policy analysis, new entrepreneur in logistics and supply chain and future automotive business networking. With field experience, individuals with business technology master degree may also be able to teach at the college and university level or work in government. The powerful combination of coursework and applied knowledge in business technology master programs can help prepare students for careers in these fields. The Master of Business Technology is different from Master Business Administration (MBA) since the latter focus on administrative knowledge in accounting, economics, marketing, and operations and allows candidates to pursue their own personal and professional interests in business without advance knowledge in technology.

**CAREER INFORMATION**

This postgraduate program is designed to equip students with knowledge in automotive and logistics management and technology at an intermediate level. It offers courses that can be grouped into three areas, namely industrial services, distribution and logistics as well as the automotive business, to fulfill the needs in business and technical management skills

**Job Opportunities:**

- Cloud-based Entrepreneur
- Manager in Electronics Industries and Services
- Part and Component Distributor
- Automotive & Mobility Dealer
- ERP Application Designer
- Mobility & Locality Strategies
- Architecture Design & Development Technology Assessor

## Program Educational Objectives (PEOs)

- 1** UniKL graduates who are **knowledgeable, competent and innovative** in new business technology focused on industrial services, distribution and logistics, and automotive business.
- 2** UniKL graduates who have effective **leadership qualities** and **communication skills** to support their roles in the industries.
- 3** UniKL graduates who are committed to the importance of **lifelong learning** and **continuous improvement**.
- 4** UniKL graduates who practice **professionalism with ethics and social responsibility**.
- 5** UniKL graduates who are **enterprising** and capable to participate in **business** and **entrepreneurial activities** in the industries.

## Program Learning Outcomes (PLOs)

- 1** Evaluate theories and concepts in business technology.
- 2** Resolve complex problems by providing recommendations to business organisations.
- 3** Organise complex tasks/operations ethically and flexibly within business organisations.
- 4** Demonstrate effective and cogent written and oral communication and collaborative skills with diverse stakeholders in business technology.
- 5** Demonstrate relevant digital skills for research/work/business technology study.
- 6** Interpret numerical, qualitative and graphical data to support decision-making and problem-solving in work/ business technology study.
- 7** Display leadership skills and responsibility in managing business organisations.
- 8** Display continuous self-improvement for academic and career development.
- 9** Display entrepreneurship skills in resolving business problems.

## SYNOPSIS OF COURSES

### COURSE OFFERED BY MECHANICAL SECTION (DIPLOMA)

#### SSD11203 - Engineering Science

**Pre-Requisite:** Nil

**Synopsis:**

This course is designed to enhance the basic skill in mechanical and electrical engineering in their previous studies. Students will be exposed on motion in one dimension, Newton's Law of motion, work and energy, rotational motion, momentum and impulse and analyze in terms of mechanics, structure and flow of an object.

**References:**

W.Bolton. (2020) **Engineering Science** 7<sup>th</sup> Edition. England, UK: Routledge.

#### SDD12302 - Materials Science

**Pre-Requisite:** Nil

**Synopsis:**

This subject focuses on metal & non-metal materials used in manufacturing processes in terms of their physical, chemical, mechanical and technological properties.

**References:**

1. Callister, W.D. and Rethwisch, D.G. (2018). **Materials Science and Engineering: An Introduction**. 10<sup>th</sup> ed. Hoboken (NJ): John Wiley & Sons.
2. Callister, W.D and Rethwisch, D.G. (2012). **Fundamentals of Materials Science and Engineering: An Integrated Approach**. 4th ed. Hoboken (NJ): John Wiley & Sons.
3. Budinski G.K., Budinski M. K. (2010). **Engineering Materials: Properties and Selection**. 9th ed. USA: Prentice Hall Press.

#### SDD11402 - Fitting and Welding Fundamental

**Pre-Requisite:** Nil

**Synopsis:**

This course introduces the students with the knowledge of basic tools for common practice in basic fitting and welding process to perform joining between the metals.

**References:**

1. Kalpakjian, S., Schmid, S. R., & Sekar, K. S. (2016). **Manufacturing: Engineering and Technology**. Melbourne, Victoria, Australia: Pearson Australia.
2. Bruce J. Black (2015). **Workshop Processes, Practices and Materials** (5<sup>th</sup> Edition). Routledge.
3. Christena, S. B. (2014). **Learn to Weld: Beginning MIG Welding and Metal Fabrication Basics**. Crestline Books.

#### SDD11302 - Engineering Drawing

**Pre-Requisite:** Nil

**Synopsis:**

This subject exposes the students on knowledge of technical drawings, focusing on producing engineering drawings by using hand tools/instruments. This subject covers the study of object representation in 2-D and 3-D views such as orthographic projection, isometric projections, and sectional views. Furthermore, this subject also exposes on conventions and standard practices in creating engineering drawing such as title blocks and layout.

**References:**

1. K. Rathnam (2018). **A First Course in Engineering Drawing**; Springer.
2. David P. Madsen (2012). **Engineering Drawing and Design**, Clifton Park, NY: Delmar, Cengage Learning.

#### SDD12303 - Engineering Mechanics

**Pre-Requisite:** Nil

**Synopsis:**

This subject focuses on solving engineering problems using Newton's law of motion in Statics and Dynamics. In Statics, students will learn how to solve problems such as force resultants, static equilibrium of a particles and rigid bodies, structural analysis and friction. In Dynamics, students will learn how to solve problems regarding motion in kinematics and kinetics for particles and rigid bodies.

**References:**

1. Hibbler R. C. (2016). **Engineering Mechanics: Static**. (15<sup>th</sup> ed.). Singapore: Prentice Hall.
2. Hibbler R. C. (2016). **Engineering Mechanics: Dynamics**. (15<sup>th</sup> ed.). Singapore: Prentice Hall.

**SDD12503 - Metrology****Pre-Requisite:** Nil**Synopsis:**

This course focuses study on the principles and methods of measurement, testing and inspection with emphasizing on the use of dimensional metrological instruments within automotive components for geometric characteristics, surface finish and coordinate measurement.

**References:**

1. Basic Metrology and Applied Metrology Lab
2. Dotson, C. L. (2016). *Fundamentals of Dimensional Metrology*. (6<sup>th</sup> ed.). New York: Thomson Delmar Learning.
3. Farago, F. T., & Curtis, M. A. (2014). *Handbook of Dimensional Measurement*. (5<sup>th</sup> ed.). USA: Industrial Press Inc.

**SDD23203 - Applied Materials****Pre-Requisite:** SDD12302 - Materials Science**Synopsis:**

This subject establishes a broad knowledge of science behind materials behaviours and properties. It also introduces the basic techniques of analysing metal's characteristics by metallographic procedures. The subject will also relate the classification, types of steel and cast iron used in the machine tool sector. It also covers a very basic knowledge and understanding of mechanical and destructive testing in metallurgy. **References:**

1. Callister, W.D. and Rethwisch, D.G. (2018). **Materials Science and Engineering: An Introduction**, 10<sup>th</sup> ed. Hoboken (NJ): John Wiley & Sons.
2. Budinski G.K., Budinski M. K. (2010). *Engineering Materials: Properties and Selection*. 9<sup>th</sup> ed. USA: Prentice Hall Press.
3. Donald R. Askeland, Pradeep P. Fulay and Wendelin J. Wright. (2010). *The Science and Engineering of Materials*. 6<sup>th</sup> ed. CL Engineering.

**SDD12202 - Computer Aided Design****Pre-Requisite:** SDD11302 - Engineering Drawing**Synopsis:**

This subject is focusing on the introduction, identification and understanding the environment, the use of equipment required while using CAD system, to understand engineering features the came with solid modelling, which compromise of the Operation Systems together with CAD program itself which is to get the user to be more aware of CAD environment and be able to draw technical drawing, assembly and exploded views, detail drawings, bill of materials and etc.

**References:**

1. K. Rathnam (2018). **A First Course in Engineering Drawing**; Springer.
2. William E. Howard (2017). **Introduction to Solid Modelling Using SolidWorks** 2017, McGraw-Hill Education, 2017

**SDD23603 - Ergonomics & Human Factors****Pre-Requisite:** Nil**Synopsis:**

This module covers the important aspects on ergonomics concepts and practices. Students will first be introduced to ergonomics in general, musculoskeletal system of human body, engineering anthropometry, biomechanical bases of ergonomics, work physiology. This module will also expose students to anthropometric data for vehicle design, vehicle's interior layout, manual materials handling, work-tool design, man-machine systems, occupational environments, thermal, light, noise and vibration. At the end of the module, will be able to do ergonomic assessment of workplace, implementation of ergonomics program.

4. Shrawan Kumar (2007). **Biomechanics in Ergonomics**. 2nd Ed., CRC Press, Taylor & Francis Group.

**SDD23503 - Strength of Materials****Pre-Requisite:** SDD12303 - Engineering Mechanics**Synopsis:**

This subject focuses on solving engineering problems using stress and strain, mechanical properties of materials, shear forces and bending moment, deflection, torsion, combined stresses, frame and machine.

**References:**

1. R.C. Hibbler. (2017). **Mechanics of Materials**. (10<sup>th</sup> ed.). Prentice Hall.
2. Ferdinand P. Beer, E. Russell Johnston Jr., John T. DeWolf and David F. Mazurek (2014). **Mechanics of Materials**. (7<sup>th</sup> ed.). McGraw-Hill Education.
3. James M. Gere and Barry J. Goodno (2012). **Mechanics of Materials**. (8<sup>th</sup> ed.). CL Engineering.
4. Harold I. Morrow and Robert P. Kokernak (2010). **Statics and Strength of Materials**. (7<sup>th</sup> ed.). Prentice Hall.

**SDD24103 - Machine Component Design****Pre-Requisite:** SDD23503 - Strength of Materials**Synopsis:**

This course presents the principles of components design such as gear, shaft, clutch, bearing and etc. In particular, it emphasizes on the key element of design which include strength analysis and professional ethics in generating inherently safe, economic and good products. It also deals with selection of appropriate mechanical components from the standard and manufacturers' catalogues in the design solutions.

**References:**

1. Budynas, Richard G.; Nisbett, Keith J. (2019). Shigley's **Mechanical Engineering Design** (in SI Units). 11<sup>th</sup> Edition. McGraw-Hill Education (Asia).

4. Kenneth d'Entremont (2020). **Engineering Ethics and Design for Product Safety**. 1<sup>st</sup> Edition. McGraw-Hill Education.

**SDD24303 - Mechanical Design Process****Pre-Requisite:** SDD12202 - Computer Aided Design**Synopsis:**

The topic covers approach towards basic design skills, methodology and basic product construction. The application of engineering sketching, model construction and technical documentation were added for their understanding. Products. MDP is the main subject for mechanical students to explore their skills on how to tackle mechanical design problem through basic reverse engineering and conceptual design activities. Designing for strength and the selection criteria.

2. Richard Budynas and Keith Nisbett (2014). **Shigley's Mechanical Engineering Design**; 10<sup>th</sup> ed. McGraw-Hill Education.

**SDD11203 - Engineering Drawing & CAD****Pre-Requisite:** SDD12302 - Materials Science**Synopsis:**

This is an introductory course aimed at providing students with the fundamental concepts of technical drawing and CAD which form the foundation for their study in later years. These concepts are essential for the students will employ knowledge in the design work.

**References:**

1. K. Rathnam (2018). **A First Course in Engineering Drawing**; Springer

3. David P. Madsen (2012). **Engineering Drawing and Design**, Clifton Park, NY: Delmar, Cengage Learning.

**SDD23703 - Industrial Mechanics and Maintenance****Pre-Requisite:** SDD12303 - Engineering Mechanics**Synopsis:**

The subject will expose the students with basic tolerance and adjustments concept. This is very important fundamental knowledge to understand the concept of fitting the components. Hand tools and joining methods are introduced and practiced. Then mechanical components that are commonly used are introduced such as bearing, pulley, belting, gears, guide rails and power transmission system. The students also will hand on to know how knowledge of this components. The type and the cause of breakdown of these components are also introduced and evaluated. The diagnosis methods that are essential in maintenance also introduced.

## COURSE OFFERED BY MECHANICAL SECTION (BACHELOR)

**SCB12103 - Engineering Mechanics****Pre-Requisite:** Nil**Synopsis:**

**Statics:** Development of free-body diagrams and self-checking strategies to solve static equilibrium engineering problems using Newton's law of motion; equilibrium of a particles, force system resultants, equilibrium of rigid bodies, center of gravity and centroids, distributed loading, analysis of structure, internal forces and friction.

**Dynamics:** This topic focuses on the application for Newtonian physics on physical situation and mathematical description of motion and determine motion in problems involving the concepts of force and energy. This topic is restricted to 2-D & 3D mechanisms.

**References:**

5. Harold I. Morrow and Robert P. Kokernak (2010). **Statics and Strength of Materials.** (7th ed.). Prentice Hall.

**SCB23302 - Fundamental of Material Science****Pre-Requisite:** Nil**Synopsis:**

This course focuses on the fundamentals of structure, energetics, and bonding that underpin materials science. Topics include: the mechanical properties of materials, the distinction between elastic and plastic deformation of crystalline solids, the theoretical strength of crystalline solids, effect of dislocations, types of failure mechanisms, theological properties of materials, models of viscoelastic behavior the formation of crystalline solids, direct observation of the microstructure of materials, the failure of materials in engineering service, polymers and composites.

**SCB 24603/ SCB23304 - Fluid Mechanics****Pre-Requisite:** SCB 12103 Engineering Mechanics**Synopsis:**

Fluid properties, fluid statics, fluid in motion, pressure variation in flowing fluids, momentum and energy principles, dimensional analysis and similitude, flow in conduits, flow measurements and introduction to turbomachinery.

**References:**

- Yunus A. Cengel, Robert H. Turner, and John M. Cimbala. (2012). *Fundamentals of Thermal-Fluid Sciences*. (4<sup>th</sup> ed. in SI Units.). Singapore: McGraw-Hill.

**SCB23503 - Chassis and Vehicle Dynamics****Pre-Requisite:** SCB12303 - Automotive Engineering Fundamental**Synopsis:**

Introduction to stress and strain, mechanical properties of materials, axial, bending, torsion and combined loading of structures, shear forces and bending moments in beams, shear stresses, thin-walled pressure cylinders, stress transformation, Mohr's circle, principle stresses, buckling of columns and theories of failures.

**References:**

**SCB24203 - Internal Combustion Engine****Pre-Requisite:** SCB 23603 Thermal Science, SCB 24603 Fluid Mechanics**Synopsis:**

The course will introduce the students to internal combustion engines, working principle, their efficiency and pollutants emission. It looks at the various emerging power technologies in the automotive industry and the current and alternatives fuels and combustion processes. Choices of fuel and the design of efficient engine operating parameters and their products will be discussed

**References:**

**SCB24503 - Engineering Materials****Pre-Requisite:** SCB23302 - Fundamentals of Materials Science**Synopsis:**

The course examines the different types of materials used in the automotive industry, including metals, ceramics and composites. Selection of the appropriate material for a variety of applications will be discussed in terms of the material properties, ease of manufacture and performance in the anticipated service environment. Case studies will be used to demonstrate the design principles used when using each of these materials for automotive applications.

**SCB35403 - Vibration and Noise****Pre-Requisite:** SCB12103 Engineering Mechanics**Synopsis:**

This course will provide an introductory view of the fundamentals and principles of mechanical vibration. Students will learn the basics of the formulation of the equations of motion for single and multi-degree of freedom systems as well as continuous systems such as beams and plates. These equations will be solved and applied to various engineering problems.

**SCB48203 - Automotive Structure****Pre-Requisite:** Nil**Synopsis:**

The structural design concept, monologue structures, chassis frame structures, general loads on vehicle, analysis and design of chassis frames, analysis and design of automotive structures using Simple Structural Surfaces (SSS), load and stress analysis in panels and frame members, introduction to vehicle crashworthiness.

**References:**

1. Advanced Strength and Applied Stress Analysis, Budynas, R.G., McGraw Hill, 1999.

**SCB36203 - Automotive Structure****Pre-Requisite:** SCB12102 Fundamental of Materials Science, SCB23103 Strength of Materials.**Synopsis:**

The course covered on the structural design concept, monocoque structures, chassis frame structures, general loads on vehicle, analysis and design of chassis frames. The problem solving examined in analysis and design of automotive structures used Simple Structural Surfaces (SSS), load and stress analysis which included the panels and frame members. The course also explored into the introduction to vehicle crashworthiness.

**SCB47803/ SCB44304 - Automotive Ergonomics****Pre-Requisite:** Nil**Synopsis:**

This module covers the important aspects on ergonomics concepts and practices. Students will first be introduced to ergonomics in general, musculoskeletal system of human body, engineering anthropometry, biomechanical bases of ergonomics, work physiology. This module will also expose students to anthropometric data for vehicle design, vehicle's interior layout, manual materials handling, work-tool design, man-machine systems, occupational environments, thermal, light, noise and vibration. At the end of the module, will able to do ergonomic assessment of workplace, implementation of ergonomics program.

**SCB 47204 - Heat Exchanger Design****Pre-Requisite:** SCB23603 Thermal Science, SCB24603 Fluid Mechanics**Synopsis:**

Review of heat transfer by conduction, convection and radiation is given. The design applications developed concentrate on more realistic mixed mode or complex heat transfer, e.g. fins (radiator and heat sinks for automotive electronic components, compact heat exchangers), flat plate solar collectors, heat exchangers, etc. The assessed portion of the course will be a heat exchanger design exercise.

**SDB24103 - Design for Plastics & Elastomer****Pre-Requisite:** SDB 12103 - Computer Aided Design & Modelling**Synopsis:**

This course covers the basic product design using plastic and elastomer including the construction of different concept in design selection. The design of plastics products is developed by considering the material selection, appearances, and other criteria in design guidelinesIt includes the application of CAD software in designing product and application of others method in designing.

**References:**

**SDB35103 - Design for Sheet Metal Forming****Pre-Requisite:** SDB 12103 - Computer Aided Design & Modelling**Synopsis:**

This subject focus on application of sheet metal forming process (bending, drawing, ironing, spinning, shearing and blanking etc.) and formability of metals in sheet metals forming. It is also cover the description of tools and die (progression die, stage die, transfer die), friction and lubrication, type of die materials that participate in the forming process, spring-back, force calculation, part defect and equipment in forming process

**SDB36103 - Machine & Mechanism Design****Pre-Requisite:** SCB 11103 - Engineering Mechanics**Synopsis:**

The subject will involve the study of kinematics analysis, planar rigid body motion, mass moment of Inertia, introduction to mechanisms, planar mechanisms, mechanisms analysis. Students will be involved in design of parts and mechanism including calculations to solve real engineering problems.

**References:**

1. Russell C. Hibbeler, Engineering Mechanics: Dynamics. 14<sup>th</sup> Ed. Pearson. 2016.

**SDB23103 - Computer Aided Design & Modeling****Pre-Requisite:** SCB12403 Engineering Drawing and CAD**Synopsis:**

This subject will focus on introduction and understanding of the CAD environment for modelling of parts, components and systems. Features and techniques will be taught for effective and efficient methods and also exposure will be given for understanding the engineering features in the CAD system. Modelling will be taught in 2D & 3D solid modelling and assembly. At the end of the subject, the subject will describe on how to create detail drawing of various designed parts

**SDB47303 - Introduction to Oil and Gas Industry****Pre-Requisite:** Nil**Synopsis:**

The course is aimed at introducing to students the various aspects of the oil and gas industry, both upstream and downstream, and making them aware of the role of various disciplines throughout the life cycle of petroleum.

**References:**

1. J. Hilyard (2012). The Oil & gas Industry: A non-technical guide, USA, PennWell Corp.

**SDB47403 - Applied Computational Fluid Dynamics**

**Pre-Requisite:** SCB 23603 Thermal Science, SCB 24603 Fluid Mechanics, SCB 24403 - Finite Element Method

**Synopsis:**

This course will provide core knowledge of the fundamentals of CFD, and an introduction to the methods and analysis techniques used in CFD. It also provides an introduction to the use of commercial CFD packages to analyse flow and heat transfer in problems of practical engineering interest. The emphasis of the course is on the use of CFD as a virtual fluid laboratory. By studying a variety of flow situations students will develop a better intuition of fluid mechanics more quickly than is possible with traditional analytical approaches. At the end of the course students will understand the process of developing a geometrical model of the flow, applying appropriate boundary conditions, specifying solution parameters, and visualizing and analysing the results. Through the course study, students will also become conscious of the limitations of CFD and develop an appreciation for the factors limiting the accuracy of CFD solutions.

## COURSE OFFERED BY MANUFACTURING SECTION (DIPLOMA)

**SMD11302 - Basic Fitting****Pre-Requisite:** Nil**Synopsis:**

This subject introduces the students with the knowledge of hand tools and its usage techniques for common practice in basic fitting such as marking, scribing, measuring, sawing, drilling and bending.

**References:**

1. Kalpakjian, S., Schmid, S. R., & Sekar, K. S. (2016). *Manufacturing: Engineering and Technology*. Melbourne, Victoria, Australia: Pearson Australia.
2. Bruce J. Black (2015). *Workshop Processes, Practices and Materials* (5<sup>th</sup> Edition). Routledge.

**SMD12103 - Conventional Machining****Pre-Requisite:** Nil**Synopsis:**

Conventional machining involved the process of removing material specifically metal to produce desired shape and geometry with accurate dimensions. It is fundamental for students to gain skill of manual machining to understand the concept and the techniques of material removal before proceed with advance machining.

**References:**

1. Kalpakjian, S., Schmid, S. R., & Sekar, K. S. (2016). **Manufacturing: Engineering and Technology**. Melbourne, Victoria, Australia: Pearson Australia.

**SMD24803 - CNC Lathe****Pre-Requisite:** Nil**Synopsis:**

CNC Lathe is one of the subjects focuses on integration of machining process (programming, machine set-up and usage, program transfer, work piece preparation, etc.) and characteristics of the material performed by CNC lathe machine. Students will be exposed to the tools, tool holders and devices to refer the shapes, type of materials that participate in the machining process, clamping, safety during operations and identify machine components requiring usage or first level maintenance (filters, lubrication devices, protections and etc.)

**References:**

2. Kalpakjian, S., Schmid, S. R., & Sekar, K. S. (2016). **Manufacturing: Engineering and Technology**. Melbourne, Victoria, Australia: Pearson Australia.

**SMD23603 - CNC Milling****Pre-Requisite:** Nil**Synopsis:**

This subject focuses on integration of machining process (programming, machine set-up and usage, program transfer, workpiece preparation, etc) and characteristics of the material performed by CNC milling machine. It is also covering the description of tools, tool holders and devices to refer the shapes, type of materials that participate in the machining process, clamping, safety during operations and identify machine components requiring usage or first level maintenance (filters, lubrication devices, protections and etc).

**References:**

1. CNC Lathe Fagor Manual
2. Kalpakjian, S., Schmid, S. R., & Sekar, K. S. (2016). **Manufacturing: Engineering and Technology**. Melbourne, Victoria, Australia: Pearson Australia.

**SMD24502 - Welding Technology****Pre-Requisite:** Nil**Synopsis:**

This subject focus on the process or procedure to perform joining or fabricate the metal.

**References:**

1. Christena, S. B. (2014). **Learn to Weld: Beginning MIG Welding and Metal Fabrication Basics**. Crestline Books.

**SPD23202 - Electro Discharge Machine (EDM)****Pre-Requisite:** Nil**Synopsis:**

This course focuses mainly on the understanding of Electro Discharge Machining (EDM) processes. It involves combination of theories and practical practices to ensure students understand the concept, function and application of the machines involved. Student will be learning on generating programming manually using Fanuc Sapt Cut i Software, selecting the suitable materials, tools and various types of machining process using either EDM Die Sinker or EDM Wire Cut. Safety practice will be given top priority. At the end of this course, the students should be able to distinguish the processes, machineries, materials, function ability, tools, cost and the technology involved in the non-traditional EDM machining processes.

**References:**

1. Kalpakjian, S., Schmid, S. R., & Sekar, K. S. (2016). **Manufacturing: Engineering and Technology**. Melbourne, Victoria, Australia: Pearson Australia.

**SPD23102 - Operations Management****Pre-Requisite:** SPD 11102 - Dimensional Metrology**Synopsis:**

Production and operations managers ensure that quality products are produced and delivered as quickly and cost effectively as possible. Operations Management prepares students with the expertise to manage people and processes in order to produce high-quality goods and services that meet customer demand.

**References:**

1. Heizer, J., Render, B., & Munson, C. (2016). **Operations Management: Sustainability and Supply Chain Management**, Global Edition (12<sup>th</sup> ed). Pearson Education Limited.
2. Md. Zain R, et al. (2015). **Operations Management** (1<sup>st</sup> ed). K.Lumpur: Oxford University Press.

**SPD24202 - Production System Design****Pre-Requisite:** Nil**Synopsis:**

This subject is mainly focus on the design of goods, process strategy, location strategies, layout strategies, human resources and job design.

**References:**

1. Heizer, J., Render B. & Munson, C. (2016). **Operations Management Sustainability and Supply Chain Management** (12<sup>th</sup> ed). Pearson.

**SPD35402 - Inventory Management & Scheduling****Pre-Requisite:** Nil**Synopsis:**

The subject focuses on forecasting, inventory management, aggregate planning, material requirement planning and lean productions.

**References:**

1. Heizer, J., & Render B. (2014). **Operations Management Sustainability and Supply Chain Management** (11th ed). New Jersey: Pearson Education International.
2. Ostwald, P.F., & Munoz, J. (2008). **Manufacturing Processes & Systems**. (9<sup>th</sup> ed.) Delhi: Wiley.

**SPD35102 - Industrial Safety & Health****Pre-Requisite:** Nil**Synopsis:**

This subject provides the student with the rationale for providing an occupationally safe and healthy work environment for employees. They will be introduced to one of the most important aspects in OSH which is Hazard Identification, Risk Assessment, and Risk Control (HIRARC). This will help students to learn on the strategies to deal with OSH issues in the workplace.

3. Guidelines for Hazard Identification, Risk Assessment and Risk Control (HIRARC) (2008). Department of Occupational Safety and Health, Ministry of Human Resources, Malaysia.

**SPD35203 - Quality & Continuous Improvement****Pre-Requisite:** Nil**Synopsis:**

This course mainly focuses on the continuous quality improvement and its improvement techniques and tools. The students will be exposed on the application of Statistical Quality Control (SQC), and other quality improvement tools for example, Total Productive Maintenance (TPM) and Kaizen. The content also covers the implementation of quality standard, which is ISO9000, and the classification of costs for quality.

**SPD35502 - Engineering Ethics****Pre-Requisite: Nil****Synopsis:**

This course aims to produce graduates who understand its role as responsible engineering technologist in developing the community. Therefore, this program aims to create awareness on engineering ethics and human values, to understand social responsibility of engineering technologist and to appreciate ethical dilemma while discharging duties in professional life.

**References:**

## COURSE OFFERED BY MANUFACTURING SECTION (BACHELOR)

**SFB 12102 - Workshop Technology****Pre-Requisite:** Nil**Synopsis:**

This subject is a combination between theory and practical of many workshops' tools and machines. This subjects also will provide knowledge about the safety practices in engineering mechanical workshop, measurement and measuring tools, introduction to theory and practices of machining processes, turning, milling drilling and grinding, introduction to theory and practices of fabrication processes and also bench working. Before doing practical tasks in the workshop the students shall be introduced with the theoretical part on the machining process such as workbench tools, metrology tools, conventional and CNC machines as well.

3. Joe Martin, Tabletop Machining: **A Basic Approach to Making Small Parts on Miniature Machine Tools.**
4. Ted Busch, Roger Harlow, Richard L. Thompson, **Fundamentals of Dimensional Metrology**, 5th Ed

**SFB 23202 - Professional Engineering Practice and Ethics****Pre-Requisite:** Nil**Synopsis:**

In this course, the student learnt the ethics and professionalism in engineering. It cover of responsible professionals and corporations, moral reasoning and codes of ethics, Moral frameworks, Engineering as Social Experimentation, commitment to Safety and Global Justice.

**References:**

1. Charles B. Fledderment (2012). Engineering Ethic Fourth Edition, Prentice Hall.

**SFB 23102 - Production Planning****Pre-Requisite:** Nil**Synopsis:**

This subject devoted into several parts which includes.

- Forecasting – provides important insight on forecasting as well as information on how to develop and monitor forecast.
- Production system design – covers product design (a brief of service design as well), capacity planning process selection, facility layout, design of work systems, and location planning and analysis.

Inventory management and scheduling – relates to the management and control of inventories, and scheduling. The basic issues are how to best manage resources to effectively match supply and demand.

**SFB 35103 - Manufacturing Technology****Pre-Requisite:** SCB 23603 Thermal Science, SCB 24603 Fluid Mechanics**Synopsis:**

This subject consists of various types of manufacturing process and equipment for metal and plastic used in manufacturing production such as sand casting, investment casting and die casting. Student will also be introduced to rolling process, forging, extrusion, drawing, sheet metal forming and metal spinning.

**References:**

1. Kalpakjian & Schmid (2013). Manufacturing Engineering & Technology, Published by Prentice Hall

**SFB 35203 - Manufacturing System****Pre-Requisite: Nil****Synopsis:**

The focus of this course will be on production and assembly techniques to decide appropriate production methods. Emphasis will be on organizing the integrating manufacturing technologies such as Group Technology (GT), and other automated methods into a viable manufacturing process. The communication and impact of the new process on other functions in a manufacturing organization and operation will be examined

**SFB36102 - Automotive Safety****Pre-Requisite: Nil****Synopsis:**

This subject provides the students with the knowledge on automotive safety legislation, and the process involved in developing the legislations. It also covers the tests conducted in order to establish limitations in the rule-making process. Besides, the students will be exposed on different types of collisions, basic criteria in designing vehicle and also pedestrian protection.

4. Guidelines for Hazard Identification, Risk Assessment and Risk Control (HIRARC), Department of Occupational Safety and Health, Ministry of Human Resources, Malaysia. 2008

**SFB 36303 - CNC Technology****Pre-Requisite: Nil****Synopsis:**

This subject focuses on integration of machining process (programming, machine set-up and usage, program transfer, workpiece preparation, etc) and characteristics of the material performed by CNC lathe machine. It is also covering the description of tools, tool holders and devices to refer the shapes, type of materials that participate in the machining process, clamping, safety during operations and identify machine components requiring usage or first level maintenance (filters, lubrication devices, protections and etc)

4. CNC Milling Fagor Manual.
5. CNC Programming Handbook. 2003. Comprehensive Guide to Practical CNC Programming. Industrial Press Inc. 2nd Edition

**SFB 36403 - Operation Research****Pre-Requisite: Nil****Synopsis:**

This subject covers the introduction of operations research, linear programming, transportation models and network models. It emphasizes on problem solving and decision-making skills in engineering applications

**References:**

1. Hamdy A. Tah (2010). Operations Research: An Introduction Prentice Hall,
2. Hillier, Frederick S. And Lieberman, Gerald J. Introduction to Operations Research, 8th Edition. McGraw-Hill. Boston MA. 2005
3. Ecker, Joseph G. And Kupferschmid, Michael. Introduction to Operation Research. Kriger Publication Company.

**SFB 23302 - Production Operation Management****Pre-Requisite: Nil****Synopsis:**

This subject is mainly focus on the operation strategy, operation and productivity, project management and supply-chain management.

**References:**

1. Heizer, J., & Render B. (2014). Operation Management (11th ed). New Jersey: Pearson Education International.
2. Ostwald, P.F., & Munoz, J. (2008). Manufacturing Processes & Systems. (9th ed.) Delhi: Wiley.

**SFB 47703 - Quality Engineering****Pre-Requisite: Nil****Synopsis:**

The identification and interpretation of the concept of two main areas in quality which are quality management and quality control. It covers the quality management areas such as quality standards (ISO9000, ISO14000, ISO/TS16949), and costs of quality. This subject also covers on the application of crucial elements of quality control for example Six Sigma and process capability study. Other than that, it places emphasis on Lean Processes, additional quality techniques (TQM, QFD, TPM, Acceptance Sampling, Reliability, and TRIZ), and the core tools used in automotive industry.

**SFB 47303 - CAD/CAM Rapid Prototyping****Pre-Requisite: SCB12403 Engineering Drawing and CAD****Synopsis:**

Introduction to basic principle of CAD/CAM system & generating model and programming, basic. Utilizing modeling software and various rapid prototyping (RP) systems, creating a number of parts, assemblies and engineering drawings. Investigate the advantages and disadvantages of current RP technologies

**References:**

## COURSE OFFERED BY ELECTRICAL ELECTRONICS &amp; AUTOMATION SECTION (DIPLOMA)

**SRD 11403 - Electrical Technology****Pre-Requisite:** Nil**Synopsis:**

This course introduces to students the basic electrical circuits encompass the SI units, elements in electrical circuit and how to apply the Ohm's Law and Kirchhoff's law in electrical circuits. Besides the students will be exposed to the methods of analysis in the resistive circuits and alternating current circuits. They are also being introduced to the energy storage elements and the general form solutions for the first order circuits, techniques of DC and AC circuit analysis.

**References:**

1. R. L. Boylestad (2016), Introductory Circuit Analysis, 13th Edition. Prentice Hall, New York.
2. Edward Hughes (2012), Electrical and Electronics Technology, 11<sup>th</sup> edition. Pearson Education Limited
3. Thomas L. Floyd (2014), Principles of Electric Circuits: Conventional Current Version, 9<sup>th</sup> Edition, Pearson Education Limited

**SRD 12102 - Electronics Devices****Pre-Requisite:** SRD 11403– Electrical Technology**Synopsis:**

This course introduces to students the basic electronic device's structure, configuration and construction, the course will cover the fundamentals of electronic devices involving diodes, bipolar junction transistors and field effect transistors. The contents encompass from devices structure, operation, characteristic for certain application circuit.

**References:**

1. Boylestad, R. and Nashelsky. (2013), Electronic Devices and Circuit theory, 11<sup>th</sup> Edition. Prentice Hall.
2. Floyd, T.L. Electronic Devices (2011), 9th Edition. Prentice Hall. 2011.

**SRD 12603 - Industrial Computing****Pre-Requisite:** Nil**Synopsis:**

This course emphasis on programming using high level language such as Language C and Visual Basic. It begins with an introduction to programming, which covers a lot with software definitions, algorithm and flowchart. Next, it continues with creating the computer programs using Language C and Visual Basic by applying program control structure, functions, arrays and file I/O. Then, the subject will describe more on Human Machine Interface (HMI) application. The subject also includes individual lab task and group projects

**References:**

3. Gary J. Bronson, 2013, C++ for Engineers and Scientist. Fourth Edition: Cengage Learning.
4. Gaurav Sharma, 2015, Fundamentals of C Programming Language. First Edition, Renu Publishers.

**SRD 25103 - Control Systems****Pre-Requisite:** Nil**Synopsis:**

This subject cover identification of concept and knowledge about control system. It is also focus on the application and establishment of knowledge about the control and regulation of system which is by controlling the process and operation of the system to optimize the system performance. The students will be exposed to tuning methods suitable for difference type of industrial process control.

**References:**

1. Norman S. Nise. Control System Engineering. New York: John Wiley & Sons. 2015.
2. Schaum's Outline of Feedback and Control Systems 2<sup>nd</sup> Edition: McGraw-Hill Education. 2013

**SRD24202/ SRD25203 - Sensor Technology****Pre-Requisite:** Nil**Synopsis:**

The course provides knowledge on theoretical fundamentals, working principles, and applications of the relevant sensor classes. It emphasizes more on analysis behaviour of the sensor and transducer based on physics theory

**References:**

1. Edward Sazonov, Michael R. Neuman, Wearable sensors: fundamentals, implementation and applications, Amsterdam: AP, Academic Press is an imprint of Elsevier, 2014.

3. Clarence W. de Silva. Boca Raton, FL, Sensors and actuators: Control Systems Instrumentation. CRC Press,2007

**SRD 23103 - Digital Electronics****Pre-Requisite: Nil****Synopsis:**

This course covers fundamental topics in digital systems such as number systems, Boolean Algebra, Boolean Expression, K-Maps and basic logic gates. It includes certain techniques such as Boolean Techniques, De-Morgan Theorem, Karnaugh Map method for involves in logic simplification. Design activities include combinational logic circuit and understand the operation of various types of flip flops and also basic operation for counter and register

**References:**

3. P.W Chandana Prasad. (2002). Digital Systems Fundamentals. Petaling Jaya: Prentice Hall.

**SRD23503 - Electrical Machines****Pre-Requisite: Nil****Synopsis:**

This subject is to study on the basic operation, construction and characteristics of the electrical machine. It also focused on the machine protection mainly on the safety aspect of the motor and specific procedure on controlling the motor. This subject also explains and elaborate the controlling system of the motor by direct current and alternating current in terms of its wiring design i.e. installation (star-delta), single and three phase and also some basic calculations of the electrical magnitudes

**SRD23303 - Electronics Circuit Design****Pre-Requisite: Nil****Synopsis:**

The labs involved the application of CAD software to develop PCB layout. The list of experiments is circuit design using CAD, PCB design using CAD, project setup, parts construction, footprint design, postprocessing, dual power supply, and mixed analog/digital circuit. Students also do a mini project design using CAD software to generate the Gerber files. This Gerber files are used to fabricate the PCB.

**SRD25303 - Microcontroller****Pre-Requisite: Nil****Synopsis:**

This module provides students with theory and application knowledge about microcontroller, and all the associated devices such as the I/O's, memories, RAM, ROM and etc. This subject will expose the students to hardware and software design and interfacing aspects of single-chip microcontroller which are used as controller in embedded systems

**References:**

**SRD35603 - Electronics Instrumentation****Pre-Requisite: SRD25203 – Sensor Technology****Synopsis:**

This course introduces students to some major views in theories and its application for signal conditioning and instrumentations. It will examine some key principles of measurement and the importance of signal conditioning and instruments in process industries. The course will also provide an understanding to calibrate the instruments according to its specifications

**References:**

4. Clyde F. Coombs JR. Electronic Instrumentation Handbook, United State: McGraw-Hill, 1999.

**SRD35203 - Power Electronics and Drive****Pre-Requisite:** SRD23503 - Electrical Machines**Synopsis:**

This subject is mainly focus on two fields that is the identification and analyzation of the power electronics devices and circuits used in industry and the electrical machines control devices in industrial installation. The students need to identify the different parts and components, different types of used electrical machines and relating their function to the other components, which make up the automation process.

**SRD23703 - Internet of Things (IoT) Technology****Pre-Requisite:** Nil**Synopsis:**

This course will cover industry 4.0 framework and architecture. Key elements in industry 4.0 such as system integration, simulation, big data, Internet of Things, additive manufacturing and autonomous robotic were cover briefly in 5 major topics. Besides, the architecture of industry 4.0 implementations which is consist of 5 levels configuration level, cognition level, Cyber level, Conversion level, connection level include in this designed course.

**SED12303 - Electrotechnics****Pre-Requisite:** Nil**Synopsis:**

This subject focused on the basic wiring practice for both industrial and residential installations. It also covers the basic knowledge on the electro-technical devices and instruments, especially in performing the required installations by using the appropriate tools. In addition, it is also to provide students with clear and refined understanding of electrical installations and electrical control system. The students will be guided in the usage and fixtures of electrical items, as well as wiring installations. Health and safety aspects are incorporated into the subject to provide students with knowledge on performing work functions with due care.

**References:**

**SED 24103 - Industrial Automation****Pre-Requisite:** SED23203 – Pneumatic & Hydraulic Systems**Synopsis:**

The course is purposely designed and focuses on identification and interpretation on technical documentation concerning manufacturing systems of machinery and industrial equipment. It also covers the description and techniques used for on-plant assembly, maintenance and repair of machinery and industrial equipment and their associated systems. For the application task, the students will be exposed and familiarized with the Flexible Manufacturing System (FMS 200) and robotics including the usage of hardware and software.

**STB12202 - Electrical & Electronics Laboratories****Pre-Requisite:** Nil**Synopsis:**

The practical tasks involved the electrical practice workshop and electronic workshop. The list of experiments are electrical wiring, installation of main circuit, one-way switch, two-way switch, ceiling fan, outlet socket, electrical bell and air-conditioner. Students also do the soldering, mini project design on proto board, and circuit design on PCB

3. Electric Circuits Fundamentals. Floyd T. L. 8th edition. New York: Prentice Hall. 2009

**STB23102 - Electronic Devices****Pre-Requisite:** STB12203 Electric Circuit Analysis**Synopsis:**

This course introduces to students the basic electronic devices structure, configuration and construction, the course will cover the fundamentals of electronic devices involving diodes, bipolar junction transistors and field effect transistors. The contents encompass from devices structure, operation, characteristic for certain application circuit.

**References:**

**STB24303 - Computer Programming****Pre-Requisite:** Nil**Synopsis:**

This subject emphasis on programming using high level language such as Language C. It begins with basic introduction to programming which covers software definitions, SDLC, and algorithm. Then, it continues with developing computer programs using C Language including elementary of data structure, pre-processor directive, inputs and outputs, program control structure, functions, arrays, pointers, data structure and file input output. The subject also includes individual assignment and group projects.

**STB35103 - Pneumatics and Hydraulics System****Pre-Requisite:** SCB 24603 Fluid Mechanics**Synopsis:**

The module should prepare the student to recognize, design, and explain of pneumatic and hydraulic systems in automation system. Troubleshooting and fault finding also included.

**References:**

1. Andrew Parr, 2011, Hydraulics and Pneumatics: A technician's and engineer's guide. 3rd Ed. Amsterdam; Boston: Butterworth-Heinemann.

**STB35203 - Automotive Electrical and Electronic Systems****Pre-Requisite:** Nil**Synopsis:**

The course will introduce the students to the following topics in the area of automotive electrical and electronics which are consists of batteries, charging system, starting and ignition systems, engine management, accessories and overview of automotive electrical and electronics systems.

**References:**

1. Barry Hollebeak (2011), Automotive Electricity and Electronics Classroom Manual, 5th Edition, Thomson Delmar Learning.
2. James D. Halderman (2011), Automotive Electricity and Electronics, 3rd Edition, Pearson Prentice Hall

**STB35803 - Electric Machine Fundamentals****Pre-Requisite:** STB12203 - Electric Circuit Analysis**Synopsis:**

This subject is purposely designed to study the basic operation, construction and characteristics of the electrical machine as well as focused on the protection of the electrical machine mainly the motor for the safety purposes and how to control the motor by using specific procedure. This subject also explains and elaborate the controlling system of the motor by direct current and alternating current in terms of wiring design i.e. installation (star-delta), single and three phase and calculation using formula

**STB35903 - Microcontroller and Interfacing****Pre-Requisite:** STB12203 - Electric Circuit Analysis**Synopsis:**

One of the important components in embedded systems such as mechatronics systems is microcontroller. This subject will expose the students to hardware and software design and interfacing aspects of single-chip microcontroller which are used as controller in automotive systems.

**References:**

3. Milan Verle, PIC Microcontrollers. mikroElektronika. 1<sup>st</sup> edition (2008)

**STB35503 - Control Systems****Pre-Requisite:** Nil**Synopsis:**

This course introduces students to the fundamental ideas and definitions of control systems such as block diagrams, plants or processes, open loop and close loop control systems, transfer functions and transient and steady state responses. Students will be taught how to obtain mathematical models of actual physical systems such as electrical, mechanical, electromechanical and simple fluid flow systems. Methods of system representation such as block diagram representation and signal flow graphs will be examined. The students will also be exposed to techniques of analyzing control systems such as time domain analysis and stability. Finally, an introduction to the design and analysis of control systems using MATLAB will also be given.

2. Schaum's. (2013). Outline of Feedback and Control Systems 2<sup>nd</sup> Edition: McGraw-Hill Education.

**STB36103 - Programmable Logic Controller****Pre-Requisite:** STB24403 Digital Electronics**Synopsis:**

The subject is exposing students for the PLC system to be used in the automation system. The subject is more focused on using PLC hardware and software (programming system) as a domain to control actuators and electrical machine. Problem solving covers from basic application using timer and counter until the complex data processing using the analogue input and output applications.

**STB36203 - Electronic Instrumentation Laboratories****Pre-Requisite:** Nil**Synopsis:**

This course introduces students to some major views in theories and its application for signal conditioning and instrumentations. It will examine some key principles of measurement and the importance of signal conditioning and instruments in process industries. The course will also provide an understanding to calibrate the instruments according to its specifications

**STB36303 - Power Electronics and Drives****Pre-Requisite:** STB35803 Electric Machine Fundamentals**Synopsis:**

The course will introduce students to the following topics in the area of power electronics: power switches and their characteristics, various types of power electronics converters, drives and its applications. Besides, the students will undertake, under supervision, laboratory experiments to analyse the switching behaviours as well as investigating the output behaviours of power electronics converter and drives.

**References:**

**STB47603 - Electric Vehicle System****Pre-Requisite:** STB36303 - Power Electronics and Drives**Synopsis:**

This subject will introduce the key topics for electric and hybrid vehicle systems such concepts, vehicle mechanics, energy sources, EV-drive train and complete EV- systems. Besides, the subject will also analyse technical requirements in EV design which includes series and parallel hybrid, energy requirements, efficiency and performance comparisons. Also expose the students with case studies of real and proposed EV vehicle as part of design process

**References:**

4. Tomas Svoboda, Jan Kybic and Vaclav Hlavac, Image Processing, Analysis, and Machine Vision (A MATLAB Companion). International Student Edition, Thomson. 2008.

**STB47103 - Digital Signal Processing****Pre-Requisite:** Nil**Synopsis:**

This subject introduces students to the fundamental principles of Digital Signal Processing includes the sampling theorems, z-transform, analysis of Linear Time-Invariant Systems, Discrete-Time Systems structures, Fourier Transform, Discrete Fourier Transform and Filter design.

**References:**

1. Monolakis D.G and V. K. Ingle, *Applied Digital Signal Processing*. 1<sup>st</sup> Edition. Cambridge University Press, 2012.
2. Mitra, S. K. *Digital Signal Processing: A computer-based Approach*, 4th Edition. Prentice Hall. 2009.

**STB47803 - Introduction to Robotics****Pre-Requisite:** Nil**Synopsis:**

This course introduces about robotics technology that will include an introduction of robotics components/parts, robot characteristics and robot applications. The topics also expose a student with knowledge to evaluate robot for appropriate applications

**References:**

James W. Masterson Robert L. Towers & Stephen W. Fardo (2011), Robotics Technology., 2<sup>nd</sup> edition. The Goodheart-Willcox Company, Illinois

**STB47503 - Artificial Intelligence****Pre-Requisite: Nil****Synopsis:**

This subject is designed to introduce students to the concepts and techniques of Artificial Intelligence and its application i.e Expert System, Fuzzy Logic and Neural Network. The student will also learn on how to apply Fuzzy Logic approaches and Artificial Neural Network in their project work

**References:**

1. Stuart Russell and Peter Norvig. (2013). Artificial Intelligence: A Modern Approach. Pearson Inter. Ed.

**SAB12402 - Applied Electronics Laboratory****Pre-Requisite: Nil****Synopsis:**

Students will be exposed to the use of basic measurement devices such as Multimeter, oscilloscope, function generator and electronic tools. The devices will be used in basic AC and DC circuit using passive elements to measure and analyze different types of circuit. To further improve the student's understanding, Electronic Design Automation (EDA) will be exposed to students so that they can simulate and analyze the essential criteria of a circuit before actually assembling the components on a prototype board.

**References:**

Thomas L. Floyd and David L. Buchla (2013) Electronics Fundamentals Circuits, Devices and Applications International Edition. Pearson Education Limited

**SAB 12503 - Semiconductor Technology****Pre-Requisite: Nil****Synopsis:**

The course will provide students with a glimpse into the semiconductor industry that has brought about the technology revolution. Because of the interdisciplinary nature of the subject, its content includes concepts from electrical engineering, chemical engineering and material science. The course outline can be divided to historical development and basic concepts, manufacturing methods and equipment, measurement methods, models and simulation, limits and future trends in technologies and models

At the end of this course, one should have a good understanding of the various processing techniques used to fabricate integrated circuits and microstructures. One should understand the theory of the individual, processes, how they are characterized, both electrically and structurally, and the interrelationship of these processes when combined to fabricate integrated circuits or microstructures.

2. Sze, S. M. (2012). Semiconductor devices: physics and technology. John Wiley & Sons.

**SAB23103 - Analog Circuit Application 1****Pre-Requisite: Nil****Synopsis:**

This course introduces the characteristics and applications of passive component. The chapters will include basic circuits using passive components, network theorems, transient response in dc circuit, resonance in ac circuit and analog filters. The understanding of concepts will be extended using software tools in practical lab sessions.

**References:**

**SAB 23203 - Introduction to VLSI and Fabrication****Pre-Requisite: Nil****Synopsis:**

The course objective is to introduce the fundamental principles of VLSI (Very Large Scale Integrated) circuit design and layout, to cover the basic building blocks of large-scale CMOS digital integrated circuits, and to provide hands-on design experience using a professional IC design platform. The course topics include an overview of CMOS fabrication technologies, physical VLSI design issues (bottom-up design), basic CMOS logic gates, architectural building blocks and system design (top-down design), with a stronger emphasis on physical design principles. The IC design aspects will be reinforced with extensive laboratory exercises.

**SAB 24203 - Signals and Systems****Pre-Requisite:** Nil**Synopsis:**

This course provides comprehensive lessons of both the theory and applications in signals, systems, and transforms. Students will be exposed to the mathematical background of signals and systems, including the Fourier transform the Fourier series, the Laplace transform, the discrete-time and the discrete Fourier transforms, and the z-transform.

**SAB24703 - Object Oriented Programming****Pre-Requisite:** STB 24303 Computer Programming**Synopsis:**

This course aims to be interactive hands-on workshop discussing on the related case study. Practical sessions will focus on encoding in C++ solutions to problems. These sessions are primarily aimed at addressing problems or questions and giving feedback. Most of programming implementation time will be in these sessions and student should come in prepared. Practical sessions will also be used for practical tests

2. Dorian P. Yeager (2014). Object-Oriented Programming Languages and Event-Driven Programming. Mercury Learning.

**SAB24803 - Analog Circuit Application 2****Pre-Requisite:** SAB 12103 Analog Circuit Application**Synopsis:**

This course introduces the characteristics and applications of active components. The chapters will include basic circuits using active components. Applications and analysis using software for simulations and hardware for actual measurement using measurement devices will be exposed to the students. At the end of the course, students will be ready for electronic design in discrete component and integrated circuit.

2. Floyd, Thomas L. and David M. Buchla (2013) Analog Fundamentals: A Systems Approach. Pearson Education, Inc

**SAB 24503/ SAB 24102 - Sensor Technology****Pre-Requisite:** Nil**Synopsis:**

The course provides knowledge on theoretical fundamentals, working principles, and applications of the relevant sensor classes. It emphasizes more on analysis behaviour of the sensor and transducer based on physics theory.

**References:**

- Clarence W. de Silva. (2015). Sensors and actuators: Control Systems Instrumentation 2<sup>nd</sup> Edition. CRC Press.

**SAB 24603 - Applied Digital Electronics****Pre-Requisite:** Nil**Synopsis:**

This course develops digital design experience with particular reference to the implementation of digital systems in recognizing various number systems, Boolean algebra, Boolean expression, K-maps, logic gates, digital IC technology, combinational logic network, fundamental of sequential logic and flip-flop, counter, shift register, memory and programmable logic devices.

**References:**

1. Stephen Brown and Zvonko Vranesic (2014) Fundamentals of Digital Logic with Verilog Design 3<sup>rd</sup> Edition. Mc Graw Hill.

**SAB35503 - Engineering Electromagnetics****Pre-Requisite:** Nil**Synopsis:**

Electromagnetics course is of fundamental importance to electrical and computer engineers. This course will provide all students with the fundamental concepts associated with electromagnetic and microwave circuit. Important topics include Maxwell's equations; electrostatic and magnetostatics fields; plane wave propagations; transmission lines. Successful completion of this course will allow students study more advanced topics in the area of microwave and radio-frequency (RF) such as antenna and microwave circuit design.

**SAB36203 - Analog IC Design and Verification****Pre-Requisite:** STB 12203 Electric Circuit Analysis, STB 23102 Electronic Devices**Synopsis:**

Analog integrated circuits are critical blocks that permeate complex electronic systems. Analog circuits inevitably arise whenever those systems must interact with the analog world of sensors or actuators (including antennas, cameras, microphones, speakers, displays, lighting, motors, and many others), and when they must communicate using anything but the most rudimentary digital signals. Many applications have indeed replaced analog circuitry with their digital counterparts (such as digital audio).

However, when digitizing physical signals, analog-to-digital and digital-to-analog converters are always needed, together with their associated anti-aliasing and reconstruction filters. In addition, new applications continue to appear; their requirements demand the use of high-performance analog front ends, such as digital communication over wireline and wireless channels and micro sensor interfaces. Also, as integrated circuits integrate more functionality, it is much more likely that at least some portion of a modern integrated circuit will include analog circuitry to interface to the real world.

**SAB36403 - RF/ Microwave Circuits & Systems****Pre-Requisite:** SAB 35503 Engineering Electromagnetics**Synopsis:**

This course is to provide a thorough coverage of microwave concepts and theory based on fundamental principles of RF and microwave engineering. The course examines also microwave circuits and devices of practical importance. Lectures include electromagnetic theory, microwave waveguides, network analysis, impedance matching, couplers, filters, microwave oscillators, amplifiers, mixers and antennas.

**SAB36603 - Advanced Digital Design and FPGA****Pre-Requisite:** SAB 24603 Applied Digital Electronics**Synopsis:**

The teaching strategy is to facilitate learning through direct application of knowledge with real software and hardware tools in a laboratory environment using real case examples and assignment. In this class, the VHDL/Verilog tools and programming is used to provide hands-on learning which will allow students to understand and appreciate behavioral and structural modelling through simple examples. The programs are also debugged, simulated, and eventually demonstrated on FPGA hardware. During the labs, supervision is on hand to guide the students through the tools and help during common problems.

2. Peter Wilson (2016) Design Recipes for FPGAs, Second Edition: Using Verilog and VHDL 2<sup>nd</sup> Edition, Newnes.

**SAB35103 - PCB Design****Pre-Requisite:** Nil**Synopsis:**

The labs involved the application of CAD software to develop PCB layout. The list of experiments is circuit design using CAD, PCB design using CAD, project setup, parts construction, footprint design, post-processing, dual power supply, and mixed analog/digital circuit. Students also do a mini project design using CAD software to generate the Gerber files. This Gerber files are used to fabricate the PCB.

**References:**

Simon Monk (2014) Make Your Own PCBs with EAGLE. McGraw-Hill Education.

**SAB36103 - Applied Control Systems****Pre-Requisite:** STB 35103 - Control System Theory**Synopsis:**

The course is a continuation to subject control system theory that covers only analog control system. Applied Control System will focus more in digital control system and its implementation in real application. The course provides skills in developing a working embedded system for linear control system.

**References:**

1. Phillips, C. L., & Nagle, & T. Chakraborty, H. (2014). Digital control system analysis and design. Prentice Hall Press.
2. Norman S. Nise. (2014) Control System Engineering. New York: John Wiley & Sons.

**SAB36303 - Telecommunication System****Pre-Requisite:** SAB 24203 Signal and System**Synopsis:**

Telecommunication system subject is a fundamental importance for students that interests in the field of RF/ microwave technology. This subject is divided into 2 parts which is telecommunication fundamentals and telecommunication system. The telecommunication fundamental includes basic concepts of telecommunication, quality of service and impairments. It also discusses the transmission and switching concept of transmission. The telecommunication system will cover the technology aspect of the telecommunication which includes voice telephony, digital networks, radio systems, satellite communication, fibre optic communication, cellular system and voice-over IP.

**References:**

Roger L. Freeman. (2013), Fundamentals of Telecommunications (2<sup>nd</sup> Ed.), John Wiley & Sons.

**SAB36503 - RFIC Design for Wireless Communication****Pre-Requisite:** SAB 35503 Engineering Electromagnetics**Synopsis:**

There is considerable interest in RFIC research due to the cost benefit of shifting as much of the wireless transceiver as possible to a single technology, which in turn would allow for a system on chip solution as opposed to the more common system on package. This interest is bolstered by the pervasiveness of wireless capabilities in electronics. RFIC design requires specialized and unique solutions beyond what a standard custom IC front-to-back design platform offers.

Traditionally, analog, mixed signal integrated circuits and RF systems design and simulations have been the key asset to serve these needs; however, the move to higher frequency bands, tighter on-chip integration, as well as within multi-chip modules assembled on printed circuit boards (PCBs) and latest wireless standards like LTE-Advanced (4G) or 802.11ac (WLAN) add new challenges to the underlying design platform. RFIC design includes thorough considerations of design techniques, modelling, simulation, analysis and verification solutions for a number of products to address the resulting requirements.

**STB36403 - Internet of Things (IoT) Technology****Pre-Requisite:** Nil**Synopsis:**

This course will cover industry 4.0 framework and architecture. Key elements in industry 4.0 such as system integration, simulation, big data, Internet of Things, additive manufacturing and autonomous robotic were cover briefly in 5 major topics. Besides, the architecture of industry 4.0 implementations which is consist of 5 levels configuration level, cognition level, Cyber level, Conversion level, connection level includes in this designed course.

## COURSE OFFERED BY ENGINEERING SECTION (DIPLOMA)

### WQD10103 - Technical Mathematics 1

**Pre-Requisite:** Nil

**Synopsis:**

This course covers general mathematical components involving algebra, trigonometry and complex numbers. It emphasizes on developing students' competencies to prepare them for higher level mathematics.

**References:**

1. Mathematics Central Committee Universiti Kuala Lumpur. 2012. Technical Mathematics 1 Workbook (Modules Prepared by MCC UniKL). Pearson Custom Publishing: Singapore.
2. Stroud, K. & Booth, D. 2013. Engineering Mathematics (7th Ed). Palgrave Macmillan: UK.
3. Bird, J. 2014. Engineering Mathematics (7th Ed). Routledge: Oxford.
4. Peterson, J. 2012. Technical Mathematics (4th Ed). Delmar Cengage Learning: New York.

### WQD10203 - Technical Mathematics 2

**Pre-Requisite:** WQD10103 Technical Mathematics 1

**Synopsis:**

This course covers intermediate level of mathematics involving trigonometry, functions, limits, differentiation, and integration. This is to further develop students' competencies in calculus and prepare them for higher level mathematics in science & engineering technology courses.

**References:**

1. Mathematics Central Committee Universiti Kuala Lumpur. 2012. Technical Mathematics 1 Workbook (Modules Prepared by MCC UniKL). Pearson Custom Publishing: Singapore.

4. Peterson, J. 2012. Technical Mathematics (4th Ed). Delmar Cengage Learning: New York.

### SSD 11203 - Engineering Science

**Pre-Requisite:** Nil

**Synopsis:**

This course is designed to enhance the basic skill in engineering from their previous studies. Students will be exposed on motion in one dimension, Newton's law of motion, work and energy, rotational motion, momentum and impulse and analyze in terms of mechanics, structure and flow of an object.

**References:**

3. J. Cutnell (2015). Introduction to Physics 10th Edition. John Wiley & Sons

### SSD20202 - Engineering Statistics

**Pre-Requisite:** Nil

**Synopsis:**

This subject will cover basic statistics and applied statistics involving descriptive statistics, probability, normal distribution, introduction to quality and control charts. It emphasizes on developing students' statistical skills in solving engineering problems.

**References:**

## COURSE OFFERED BY ENGINEERING SECTION (BACHELOR)

### SMB10103 - Mathematics for Engineers 1

**Pre-Requisite:** Nil

**Synopsis:**

This module offers a fundamental study of linear algebra: solving system of equations by using matrix methods such as Cramer's Rule, Gauss Elimination Method, Gauss Jordan Elimination Method and inverse matrix, as well as evaluating the eigenvalues and eigenvectors. A recall on Complex Numbers is provided as a pre-requisite to convert complex numbers in various forms. The concept of vectors and its properties which are related to the students' field are also provided. This course also provides the fundamental of multi-variable functions involving partial derivatives and multiple integrals.

**References:**

3. Hass, J., Weir, M.D. and Thomas, G.B. (2006). University Calculus. Addison Wesley.

### SMB10303 - Mathematics for Engineers 2

**Pre-Requisite:** SMB10103 Mathematics for Engineers 1

**Synopsis:**

This course covers ordinary differential equations and partial differential equations. It also provides advanced level engineering mathematics such as Laplace Transforms and Fourier Series in solving various engineering problems.

**References:**

1. John Bird, (2014), Higher Engineering Mathematics, 7<sup>th</sup> Edition. Routledge
2. Kreyszig, E. (2010). Advanced Engineering Mathematics, 10<sup>th</sup> Edition. Wiley.

### SMB11103 - Engineering Mechanics 1

**Pre-Requisite:** Nil

**Synopsis:**

The topics that are covered in this subject are fundamental concepts for the study of mechanics which includes force system, equilibrium of particles, force system resultants and equilibrium of static rigid bodies in two and three dimensions. This subject will also provide the students with the structural analysis, frictional and force members and evaluating the geometric aspect of the centroid and moment of inertia of a composite body.

### SMB10202 - Engineering Practice and Professionalism

**Pre-Requisite:** Nil

**Synopsis:**

This course introduces and exposes students to the practices and professionalism that essentials for engineers. It highlights the student on obligations and responsibilities of engineers in practicing engineering professionally furthermore create awareness among students towards self-continuous development. This course incorporates study skills, problem solving and critical thinking skills, decision-making and lifelong learning skills as well as project planning, teamwork and leadership that are applicable to the profession of engineering. Effective technical writing and speaking development in the context of academic and professional engineering will also be provided. The students will also be exposed to the accreditation and internationalization of engineers, aspects of Engineering Accreditation (EAC) and Washington Accord in engineering education of higher learning institution.

**SMB13102 - Metrology & Engineering Workshop****Pre-Requisite:** Nil**Synopsis:**

This course focuses on the principles of precision engineering to the use of measuring instruments and manufacturing equipment where accuracy, repeatability and stability are primary functional requirements as well as the principles of metrology, geometric dimensioning & tolerancing (GD&T), and uncertainty analysis. In addition, basic operation of conventional machine also will be emphasized.

**SMB20103 - Computer Programming for Engineers****Pre-Requisite:** Nil**Synopsis:**

This course introduces concepts and techniques for creating computational solutions to problems in engineering and science. The essentials of computer programming are developed using the programming languages, with the goal of enabling the student to use the computer effectively in subsequent courses. Programming topics include problem decomposition, control structures, recursion, arrays and other data structures; file I/O, graphics, and code libraries. Applications will be drawn from numerical solution of ordinary differential equations, root finding, matrix operations, searching and sorting, simulation, and data analysis. Good programming style and computational efficiency are emphasized. Although no previous programming experience is assumed, a significant time commitment is required.

**SMB21104 - Solid Mechanics****Pre-Requisite:** SMB11103 Engineering Mechanics 1**Synopsis:**

This course will cover the analysis and design of structural members subjected to tension, compression, torsion, and bending, including the fundamental concepts mentioned. Other topics of general interest are the transformations of stress and strain, combined loadings, stress concentrations, deflections of beams, and stability of columns.

**References:**

**SMB23103 - Manufacturing Processes****Pre-Requisite:** SMB10203 Materials Engineering**Synopsis:**

This course will cover the general introduction of manufacturing activities such as design process, material selection, manufacturing process, manufacturing assembly, etc. Students will be provided with knowledge to understand various manufacturing processes such as joining, casting, rolling, forging, metal sheet forming, extrusion, powder metallurgy, material removal process, plastics and composite processing, surface coating and metal protection. Besides that, they will explore the technology used, design consideration and the economics of particular processes.

**SMB31103 - Fluid Mechanics 2****Pre-Requisite:** SMB21203 Fluid Mechanics 1**Synopsis:**

This course introduces students to the mathematical description of fluid flows and the solution of some important flow problems. This course will cover flow measurements, compressible flow, external flows, and turbomachinery. Students will work to formulate the models necessary to study and analyze fluid systems through the application of these concepts, and to develop the problem-solving skills essential to good engineering practice of fluid mechanics in practical applications.

**References:**

4. White, F.M. (1998). Fluid Mechanics, 4<sup>th</sup> Edition. McGraw Hill International.

**SMB21404 - Engineering Mechanics 2****Pre-Requisite:** SMB11103 Engineering Mechanics 1**Synopsis:**

The topics that will be covered in this course are the study of the geometry of motion which relate displacement, velocity, acceleration and time, and kinetics which is the study of the relation existing between the forces acting on the body, the mass of the body and the motion of the body. The kinetic aspect will cover the equation of motion, the principle of work and energy and the principle of linear impulse and momentum. The topics also cover the application of fundamental mechanics to realistic machine configurations.

**SMB31203 - Heat and Mass Transfer****Pre-Requisite:** SMB21303 Thermodynamics 1, SMB21203 Fluid Mechanics 1**Synopsis:**

This course will cover fundamentals of heat transfer, heat conduction, heat convection, heat radiation, and heat exchanger.

**References:**

1. Cengel, Yunus A., Ghajar, Afshin J., "Heat and Mass Transfer: Fundamentals and Applications", Fifth Edition, McGraw-Hill, 2014

**SMB31303 - Noise and Vibrations****Pre-Requisite:** SMB21404 Engineering Mechanics 2**Synopsis:**

This course aims to provide students with an understanding of the nature and behaviour of mechanical vibration and noise in dynamic engineering systems. This course will cover the basic principles of noise and vibrations, free vibration in one and two degree of freedom system and the means on assessing its risk and controlling them. Measurement of vibration and noise will be covered in the practical session laboratory.

**References:**

**SMB32103 - Computer Aided Engineering Analysis****Pre-Requisite:** SMB32203 Design 2/ SMB21404 Engineering Mechanics 2/ SMB31203 Heat and Mass Transfer**Synopsis:**

This course will cover mechanical part designing, mesh creating, convergence study, result stability, result evaluation and interpreting, and Von Mises stress analysis. This will help to further students' knowledge in the use of computer aided engineering software for solids modelling, computational fluid dynamics and selected topics in FEA.

**References:**

**SMB34203 - Control Systems****Pre-Requisite:** SMB21404 Engineering Mechanics 2**Synopsis:**

This course will discuss the importance of control in time and frequency domain. It covers basic concepts of a control for open loop and closed systems. Description on system representation for electrical and mechanical systems are given in transfer function forms. Transient and steady state response of first and second order systems are presented. The stability of a system using Routh Hurwitz criterion is interpreted. Time response analysis using root locus is discussed. Frequency response analysis for Bode and Nyquist plots will represent the gain and phase margins. Finally, the course will cover controller design via root locus and frequency response.

3. Clarence W. de Silva (2010) Modelling and Control of Engineering Systems, CRC Press

**SMB46303 - Quality Engineering****Pre-Requisite:** Nil**Synopsis:**

This course will provide knowledge of quality management, up-to-date descriptions of engineering methods to measure, analyze, and design industrial work. The importance of quality and work design as part of methods engineering emphasizes not only increased productivity, but also to improve company bottom-line costs. This course also covers the Operational Production Management elements such as Queuing Model and Production System to enhance students' knowledge in analytical skill on continuous improvement of production.

2. Ramasamy,S.(2010). *Total Quality Management*.Tata McGraw-Hill

**SMB34103 - Measurement and Instrumentation Systems****Pre-Requisite:** SMB10102 Electrical Engineering/ SMB20102 Electronics Engineering**Synopsis:**

This course presents the general principles of instrumentation processes. It explains the theoretical analysis of physical phenomena used by standard sensors/ transducers to transform a physical value into an electrical signal. It also provides information on pre-processing of signals through electronic circuits - amplification, signal filtering and analog-to-digital conversion. Topics covered include qualities of measurement, transducers, signal conditioning and data acquisitions.

2. Dominique Placko (2010), *Fundamentals of Instrumentation and Measurement*, ISTE Ltd

**SMB30103 - Numerical Methods for Engineers****Pre-Requisite:** SMB10103 Mathematics for Engineers 1**Synopsis:**

This course is designed to provide students with a background in modern numerical methods. The topics covered are numerical linear algebra, numerical solution of ordinary and partial different equations, numerical methods for solving systems of non-linear equations and the introduction to optimization. Numerical computation software will be introduced in solving numerical problems.

**SMB40102 - Engineers in Society****Pre-Requisite:** SMB10202 Engineering Practice & Professionalism**Synopsis:**

In this course, the student will learn the ethics and professionalism in engineering. It covers the responsible of engineers and corporations, moral reasoning and codes of ethics. It also emphasis on the roles of engineers to safeguard the public as well as contribution toward building sustainable society and its environment.

**References:**

**SMB 30303 - Internet of Thing (IoT) Technology****Pre-Requisite:** Nil**Synopsis:**

This course will cover Industry 4.0 framework and architecture. Key elements in Industry 4.0 such as system integration, simulation, big data, Internet of Things, additive manufacturing and autonomous robotic are covered briefly in 5 major topics. Besides that, the architecture of Industry 4.0 implementation which consists of 5 levels; configuration level, cognition level, Cyber level, Conversion level, connection level is included in this course.

**SMB43103 - Design 3****Pre-Requisite:** SMB32203 Design 2**Synopsis:**

This course exposes on system definition, specification, system design, system development and implementation. This course focuses on the design of systems that produce a product. Understanding the system used to produce this design, and to produce the system, is an integral part of the course. The components of Systems Design include functional analysis, requirements analysis, translation of functions and requirements into a system and product architecture and testing to verify the product meets the requirements. Decision methodology, alternative analysis, trade studies, integration of human factors, producible, reliability, maintainability, feasibility, and safety are addressed as part of the product design system.

**SSB 10203 - Engineering Mathematics 2****Pre-Requisite:** SSB 10103 Engineering Mathematics 1**Synopsis:**

This subject will cover the basic concept of differential equation, expose the student with the different methods of solving differential equation and apply the concept of differential equation to solve the problem related to engineering in real life. It also emphasizes on integral transform to solve boundary value problem and use numerical method and matrices to solve differential equation.

4. Hayter, Anthony. *Probability and Statistics for Engineers and Scientists, 4th Ed.* Brooks/Cole, Cengage Learning. 2013

**SSB 24203 - Applied Statistics****Pre-Requisite:** Nil**Synopsis:**

This course will cover the basic and advance concept of applied statistics including descriptive statistics, probability, hypotheses testing and regression methods.

**References:**

1. William Navidi (2014), *Statistics for Engineers and Scientist* 4th edition, McGraw-Hill.
2. Douglas C. Montgomery (2013), *Applied Statistics and Probability for Engineers* – 6th edition, John Wiley & Sons Inc.

## COURSE OFFERED BY STUDENT DEVELOPMENT SECTION (DIPLOMA)

**WED10402 - Competency English****Pre-Requisite:** Nil**Synopsis:**

This course focuses on both receptive (listening & reading) and productive (speaking & writing) skills as well as grammar. Assessments will be task-based where stimulating exercises and group activities will be employed to motivate students to use the language confidently in various situations.

**References:**

**WED20202 - Communication English 1****Pre-Requisite:** WED10402 – Competency English**Synopsis:**

In this course, students' acquisition of English is enhanced through language enrichment activities that equip students with the skills to organize a language activity/event, and this involves preparing a proposal and conducting meetings. Students will also practice communicating orally with their English Day project and deliver a presentation on their project using effective visual aids.

## COURSE OFFERED BY STUDENT DEVELOPMENT SECTION (BACHELOR)

**WEB10302 - Fundamental English****Pre-Requisite:** Nil**Synopsis:**

This course aims to improve students' ability as language learners by equipping students with pertinent vocabulary skills (suffixes, prefixes, contextual clues and dictionary skills). Apart from that, students are also exposed to basic sentence structures (simple, compound and complex) and basic sentence errors (fragments, dangling modifiers, etc.). As a final assessment, they are required to prepare an article review based on the text they have chosen. During this final assessment, they are required to utilise vocabulary and writing skills taught at the initial stage. They are then tasked to present their opinions and suggestions concerning their article review using appropriate and effective presentation techniques.

**SIB23103 - Purchasing Management****Pre-Requisite: Nil****Synopsis:**

The effective management of the purchasing department is essential to the success of a firm. This course will discuss the contribution that purchasing makes to the competitive advantage of a firm, based on theories of strategic management. Some firms aim to become preferred customers of their strategic suppliers. Success in this positioning subsequently determines the firm's strategic options. In our vision, the Chief Purchasing Officer should hold a position on the firm's board. Purchasers should be fully equipped to engage in discussion at the board level. The strategy component of this course contributes to this purpose.

**SIB24403 - Supply Chain Management****Pre-Requisite: Nil****Synopsis:**

A firm's supply chain consists of all operational processes that create value for the firm. Supply chain management therefore involves the coordination of multiple value-creating processes that typically fragmented and dispersed across organizational and national boundaries. This fragmentation creates opportunities (e.g. lower costs) but also challenges (e.g. longer lead times). Firms therefore need to find a way to exploit the benefits provided by fragmented supply chains, while making sure that the challenges are managed effectively. We will also discuss the relationship between supply chain management and sustainability. The goal of the course is to develop a framework to address a variety of supply chain management challenges.

**SIB23703 - International Entrepreneurship****Pre-Requisite: Nil****Synopsis:**

Business ventures are becoming increasingly global. This course introduces the students to attractiveness and opportunities in international entrepreneurship. It is designed for students who hope to start, join or hold stakes in international ventures. It covers the aspects of starting, developing and managing an international business venture. Besides that, this course addresses the issues specific to international venturing.

**SIB35603 - Economics of Innovation and Entrepreneurship****Pre-Requisite: Nil****Synopsis:**

The course strives to distinguish the role of the capitalist from that of an entrepreneur, and to show how the actions of the entrepreneur impact new employment, economic growth, and advancements in the overall standard of living. The course provides in-depth discussion of several critical concepts: the economic development of a product; Schumpeter's "temporary monopoly control;" the economic bounds of product and process innovations; and changing production functions. It also develops and integrates an analysis of how innovation-induced modifications in either products or processes affect both short-run and long-run average costs in production. This course makes extensive use of the case study method of analysis as a basis for class discussion.

**SIB35703 - Strategic Management****Pre-Requisite: Nil****Synopsis:**

This course introduces the key concepts, tools, and principles of strategy formulation and competitive analysis. It is concerned with managerial decisions and actions that affect the performance and survival of business enterprises. The course is focused on the information, analyses, organizational processes, and skills and business judgment managers must use to devise strategies, position their businesses, define firm boundaries and maximize long-term profits in the face of uncertainty and competition. Strategic Management is an integrative and interdisciplinary course. It assumes a broad view of the environment that includes buyers, suppliers, competitors, technology, the economy, capital markets, government, and global forces and views the external environment as dynamic and characterized by uncertainty.

**SIB24803 - Automotive Commercial Relationships****Pre-Requisite: Nil****Synopsis:**

Many firms recognise the importance of establishing and sustaining mutually beneficial relationships with customers and have developed commercial relationship strategies. In this course, we examine Automotive Commercial Relationship as a business strategy that integrates internal processes and external networks to create and deliver value for targeted customers and for the organisation. We will take a broader view of 'marketing' than just designing a product, advertising, pricing and distributing it to consumers. It examines the role that stakeholders, such as internal staff, suppliers and influence groups, play in shaping relationships with customers.

## COURSE OFFERED BY BUSINESS TECHNOLOGY SECTION (MASTER)

**SLG 61303 - Strategic Management****Pre-Requisite: Nil****Synopsis:**

This course introduces the key concepts, tools, principles of strategy formulation, competitive analysis and control of technological capabilities to shape and influence the organization's strategic goals. It is concerned with the integration of technological considerations into the broader strategy of the organization, managerial decisions and actions that affect the performance and survival of business enterprises. This approach ensures that technology is leveraged as a critical resource for achieving strategic objectives, driving innovation, and sustaining competitive advantage in a rapidly evolving business environment.

**SLG 61203 - Innovation Technology and Entrepreneurship****Pre-Requisite: Nil****Synopsis:**

This course prepares postgraduate students to be business technologist with research and entrepreneurship capabilities. It discusses analyses and resolves issue relate to innovation, marketing, intellectual property and government policies. Case studies and assignments involve those of local and world scenarios.

**SLG 62203 - Managerial Economics****Pre-Requisite: Nil****Synopsis:**

Managerial Economics is a targeted course aimed at both emerging and established entrepreneurs, offering essential economic insights and technological tools for thriving in business ventures. By integrating core economic principles with the latest technological advancements, this course equips entrepreneurs with the expertise needed to make strategic decisions, streamline operations, and drive innovation in a competitive environment.

**SLG 61403 - Cloud Based Technology****Pre-Requisite: Nil****Synopsis:**

This course covers cloud computing models, techniques, and architectures. The course will expose the current practices in cloud computing including distributed computing models and technologies, Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), Software-as-a-Service (SaaS), virtualization, security and privacy issues, performance and systems issues, capacity planning, disaster recovery, Cloud OS, federated clouds, challenges in implementing clouds, data centres, hypervisor CPU and memory management, cloud hosted applications, and other advanced and research topics in cloud computing. The course will assess and evaluate the implementation of cloud computing in selected industrial engineering areas such as operation research and management, manufacturing engineering, production planning and control, product development etc. The course will develop a proposal of adopting cloud computing technology for selected industries.

**SLG 62103 - Information Technology in Project Management****Pre-Requisite: Nil****Synopsis:**

This course provides an in-depth exploration of how information technology integrates with project management principles to enhance project outcomes. Students will gain foundational knowledge in project management while learning to leverage IT tools and techniques for effective project planning, execution, and control. The course covers essential IT-related aspects of project management, including stakeholder management, project scheduling, and the use of specialized software.

**SLG 62303 - Financial Information and Analysis****Pre-Requisite: Nil****Synopsis:**

This course introduces students to the use of financial information in decision-making, with a focus on integrating technology. Students will learn to analyse and interpret financial statements using advanced digital tools. The course emphasizes the impact of financial reporting on profitability and risk assessments, leveraging technology for deeper insights. Key topics include credit and investment analysis, competitor evaluation, and company valuation. Modern financial software and data analytics are central to the course, equipping students with tech-driven analytical skills. By the end, students will be prepared to make informed financial decisions in a digital landscape.

**SLG 61103 - Research Methodology****Pre-Requisite: Nil****Synopsis:**

This course provides a comprehensive understanding of research processes, covering scientific and alternative investigation methods. Key topics include problem definition, critical literature review, theoretical frameworks, hypothesis development, measurement of variables, sampling techniques, and quantitative data analysis. Students will develop skills to conduct effective research, analyse data, and apply these methodologies to various academic and professional contexts.

**SLG63110 - Master Project in Technology****Pre-Requisite: Nil****Synopsis:**

This course is designed to guide students through the process of conducting a substantial, independent research project. The course integrates knowledge acquired throughout the program, emphasizing research design, data analysis, and the application of technology-driven solutions to business challenges. Students will produce a comprehensive research report and present their findings to an academic panel.

**SLG61603 - Technology Management****Pre-Requisite: Nil****Synopsis:**

Technology Management course typically covers a range of topics that blend the principles of management with the understanding of technology's role in organizations. Technology Management is a multidisciplinary field that integrates technology and business management. It focuses on the strategic use of technology to drive innovation, improve processes, and enhance organizational performance. The goal is to align technological capabilities with business objectives, ensuring that technology serves as a key enabler of competitive advantage and growth. This syllabus is designed to provide students with a comprehensive understanding of how to manage technology within organizations effectively, from strategic planning to practical implementation.

**SLG61503 - Sustainable Product Development****Pre-Requisite: Nil****Synopsis:**

This course offers a comprehensive exploration of managing creativity and innovation processes for sustainable products. The curriculum encompasses the entire lifecycle of sustainable research and design (R&D) product development management, from initial product definition to sustainable product development practices and financial modelling, all within the framework of the "triple bottom line" - economy, environment, and society. Throughout the course, students will learn to gather and prioritize customer and user needs, develop detailed product specifications, create prototypes, and maintain ongoing engagement with customers or communities during the product development phase. This experiential learning approach ensures that students acquire skills in development of technology acquisition and evaluation, which is a relatively straightforward process compared to data acquisition and evaluation for technology gaps and opportunities.

The course covers key topics such as sustainable new product development and entrepreneurship, strategies for transforming technology into viable business ventures, sustainable management of research and development (R&D), market adoption and technology diffusion, open innovation and technology transfer, as well as market research and new product development management. Additionally, students will delve into business models, product strategies, and brand management specifically tailored for sustainable markets.

**SLG 63503 - Port Operations and Logistics****Pre-Requisite: Nil****Synopsis:**

This course offers a comprehensive overview of the fundamental aspects of port operations and logistics, with a special focus on technology management. Students will gain an in-depth understanding of the critical components that drive the efficiency and effectiveness of modern ports, while exploring the role of technology in transforming port operations. The course is designed to cover key topics essential for those seeking to pursue careers in port management, shipping, logistics, or related fields, with a strong emphasis on integrating technological innovations.

**SLG 63703 - Automotive Dealership****Pre-Requisite: Nil****Synopsis:**

This course provides an in-depth exploration of the key aspects of managing automotive dealerships in the 21st century, emphasizing the dynamic interplay between traditional sales processes and modern customer relationship strategies. Students will gain a comprehensive understanding of how to effectively manage and optimize dealership operations, with a focus on performance, role perception, and employee satisfaction. The course also covers contemporary approaches to dealership compensation and incentive structures, essential for attracting and retaining top talent in today's competitive market.

**SLG 63103 - Quality Management System**

**Pre-Requisite: Nil**

**Synopsis:**

This course is related to the study of quality management systems and the requirement which will guide an organisation to maintain quality. In-depth explanation of the elements in the requirement and the documentation process of quality management and the initial phase of the quality management system. The course will further explain the different audit processes and certification. It also describes in detail the other related standard based management systems.

**SLG 63203 - Electronic Manufacturing Services**

**Pre-Requisite: Nil**

**Synopsis:**

This course covers the concept of electronics contract manufacturing in which the electronics component suppliers would provide the design, manufacture and testing services for OEM. It covers the local and international value chain of electronics products manufacturing. The course would discuss on current practices of EMS on non-traditional industries including consumer electronics, industrial and instrumentation; from design and Original Design Manufacturer (ODM) through assembly, test, delivery and logistics and customer service.

## FACILITIES AND ETHICS IN LABORATORY WORK

### TEACHING AND LEARNING FACILITIES

UniKL-MSI has always been progressive in acquiring and establishing educational infrastructure and facilities. It is in the main concerns of UniKL-MSI Management to facilitate proper numbers of classroom to enhance the teaching and learning. All of the classrooms were equipped with the LCD Projector System (LCD Projector & Screen). Furthermore, the classrooms were also equipped with the Wi-Fi Access Point and the students are able to access to internet with Log-in password that are published and displayed Log-in page on the web. Table 15.1 displays number of teaching and learning facilities available for classroom, lecture and teaching & learning activity. Briefly, there are three (3) lecture hall, one (1) multimedia room, 13 classrooms, five (5) computer room and one (1) library. In total, lecture halls, multimedia rooms and classrooms can accommodate at about 1400 students at one time.

**Table 15.1** Summary of Teaching and Learning Facilities

No.	Tag	Room	Facilities available	Capacity (Students)
1	AD-013	Audio Visual Multimedia Room	Audio Video system	25
2	AD-012	Computer Room 1	Screen & LCD Projector, Computer set, Whiteboard	30
3	AD-011	Computer Room 2		30
4	AD-010	Computer Room 3		30
5	AD-009	Computer Room 4		30
6	AD-111	Computer Room 5		25
7	WSR 3.0	Computer Lab (CAM)		25
8	AD-101	Al-Hambra Library	TV, computer, etc.	100
9	AD -117	Multimedia Room 1	LCD projector & AV system	60
10	AD -114	Lecture Hall A	Big screen & LCD projector, PA system, Whiteboard	180
11	AD -115	Lecture Hall B		180
12	WSR 12.0	Lecture Hall C		80
13	AD-026	Classroom 1	LCD projector, Audio Video system, Whiteboard	25
14	AD-201	Classroom 2		50
15	AD-202	Classroom 3		50
16	AD-203	Classroom 4		30
17	AD-204	Classroom 5		30
18	AD-206	Classroom 6		40
19	AD-207	Classroom 7		40
20	AD-208	Classroom 8		30
21	AD-209	Classroom 9		40
22	AD-210	Classroom 10		60
23	AD-211	Classroom 11		30
24	AD-212	Classroom 12		50
25	AD-213	Classroom 13		60

## LABORATORIES FACILITIES

The Institute provides sufficient laboratory facilities in the form of an integrated laboratory tailored for teaching and learning purposes. The lab courses teaching specifically to provide the required fundamental and basic skills in electrical engineering technology and automation. The laboratories are equipped with state-of-the-art mechanical, electronics, manufacturing and automotive facilities, and equipment that are relevant to it. Most of the engineering technology laboratories are located at the Workshop building, and the summary of the engineering technology laboratory and workshop facilities for the programme is shown in Table C15.2

**Table C15.2:** List of laboratory and workshop at workshop building and administration building.

No	Room No	Room Label	Max Capacity
1	WSL 1.0	Advance Metrology	25
2	WSL 2.0	Center of Excellence- Applied Electronics	15
3	WSL 3.0	Automotive Structure Lab	25
4	WSL 4.0	Basic Metrology Lab	25
5	WSL 5.0	Material Lab	25
6	WSL 6.0	Research Lab 1	4
7	WSL 7.0	Analogue Lab	25
8	WSL 8.0	Digital Electronic Lab	25

## OBJECTIVES OF LABORATORY WORK AND WORKSHOP

The faculty has developed laboratory work to enhance the understanding of the theory given during the lecture. The activities have been developed for the students so that it will not only provide better understanding of the concepts learned but also skills in handling the equipment and ability to solve the given problem. The laboratories are also utilised for research and consultation work for the public. Below are the objectives of the laboratory work:

- a. To develop the interest of the students in engineering field by exposing them to the work procedure and equipment handling in solving engineering problem.
- b. To relate the engineering theory by validating data obtained from the experiment.
- c. To increase the tools-handling skill and understanding the concept taught during the lecture.
- d. To simulate and analyse engineering problems that are based on the knowledge acquired in the lecture.
- e. To build up teamwork among the students during laboratory and workshop activities.
- f. To support the research activities.
- g. To provide consultation work for other institutions or agencies.

## WORK ETHICS

All students are bound to the University Regulation & Guideline while working in the laboratory. These guidelines are meant to provide safe working environment for the safety of equipment and building in the laboratory as well as to avoid accident.

The faculty has detailed out the regulations for working in laboratories as the working procedures is the fundamental aspect of laboratory activities. Students are required to follow these guidelines while they are in the laboratory or within the vicinity of the laboratory. The objectives of these guidelines are as follows: -

- a. To create a secure, safe and conducive working environment during laboratory and practical works.
- b. To guarantee the safety of the students and their environment.
- c. To highly cultivate discipline culture among students.
- d. To adapt professional working ethics.
- e. To prolong the equipments' life span and to maintain it with proper use and procedures.
- f. To prevent misuse of equipments and avoid inappropriate and unnecessary damage to the equipments.
- g. To make sure the practical work session is efficient without undue interference.

## ACKNOWLEDGEMENT

Campus would like to extend gratitude and appreciation to those who have contributed to the success of Academic Handbook completion:

Ir. Dr. Mohd Nizam Bin Ahmad  
Ts. Mohd Suyerdi Bin Omar  
Ts. Dr. Mohd Norzaimi B. Che Ani  
Shaifuladi Bin Shahrudin  
Ir. Ts. Prof. Dr. Ishak Bin Haji Abdul Azid  
Dr. Faiza Binti Mohamed Nasir  
Ts. Dr. Haris Fazilah Bin Hassan
